When should I use a Z series screw jack?

Z series screw jacks are the preferred range with the largest number of types. The Z series feature through holes for top mounting and integral pivot bearings, features not available on the GSZ series.

When should I use a GSZ series screw jack?

GSZ series screw jacks are designed for applications where smooth surfaces are required. These screw jacks are easier to clean and therefore ideal for applications in the food processing industry.

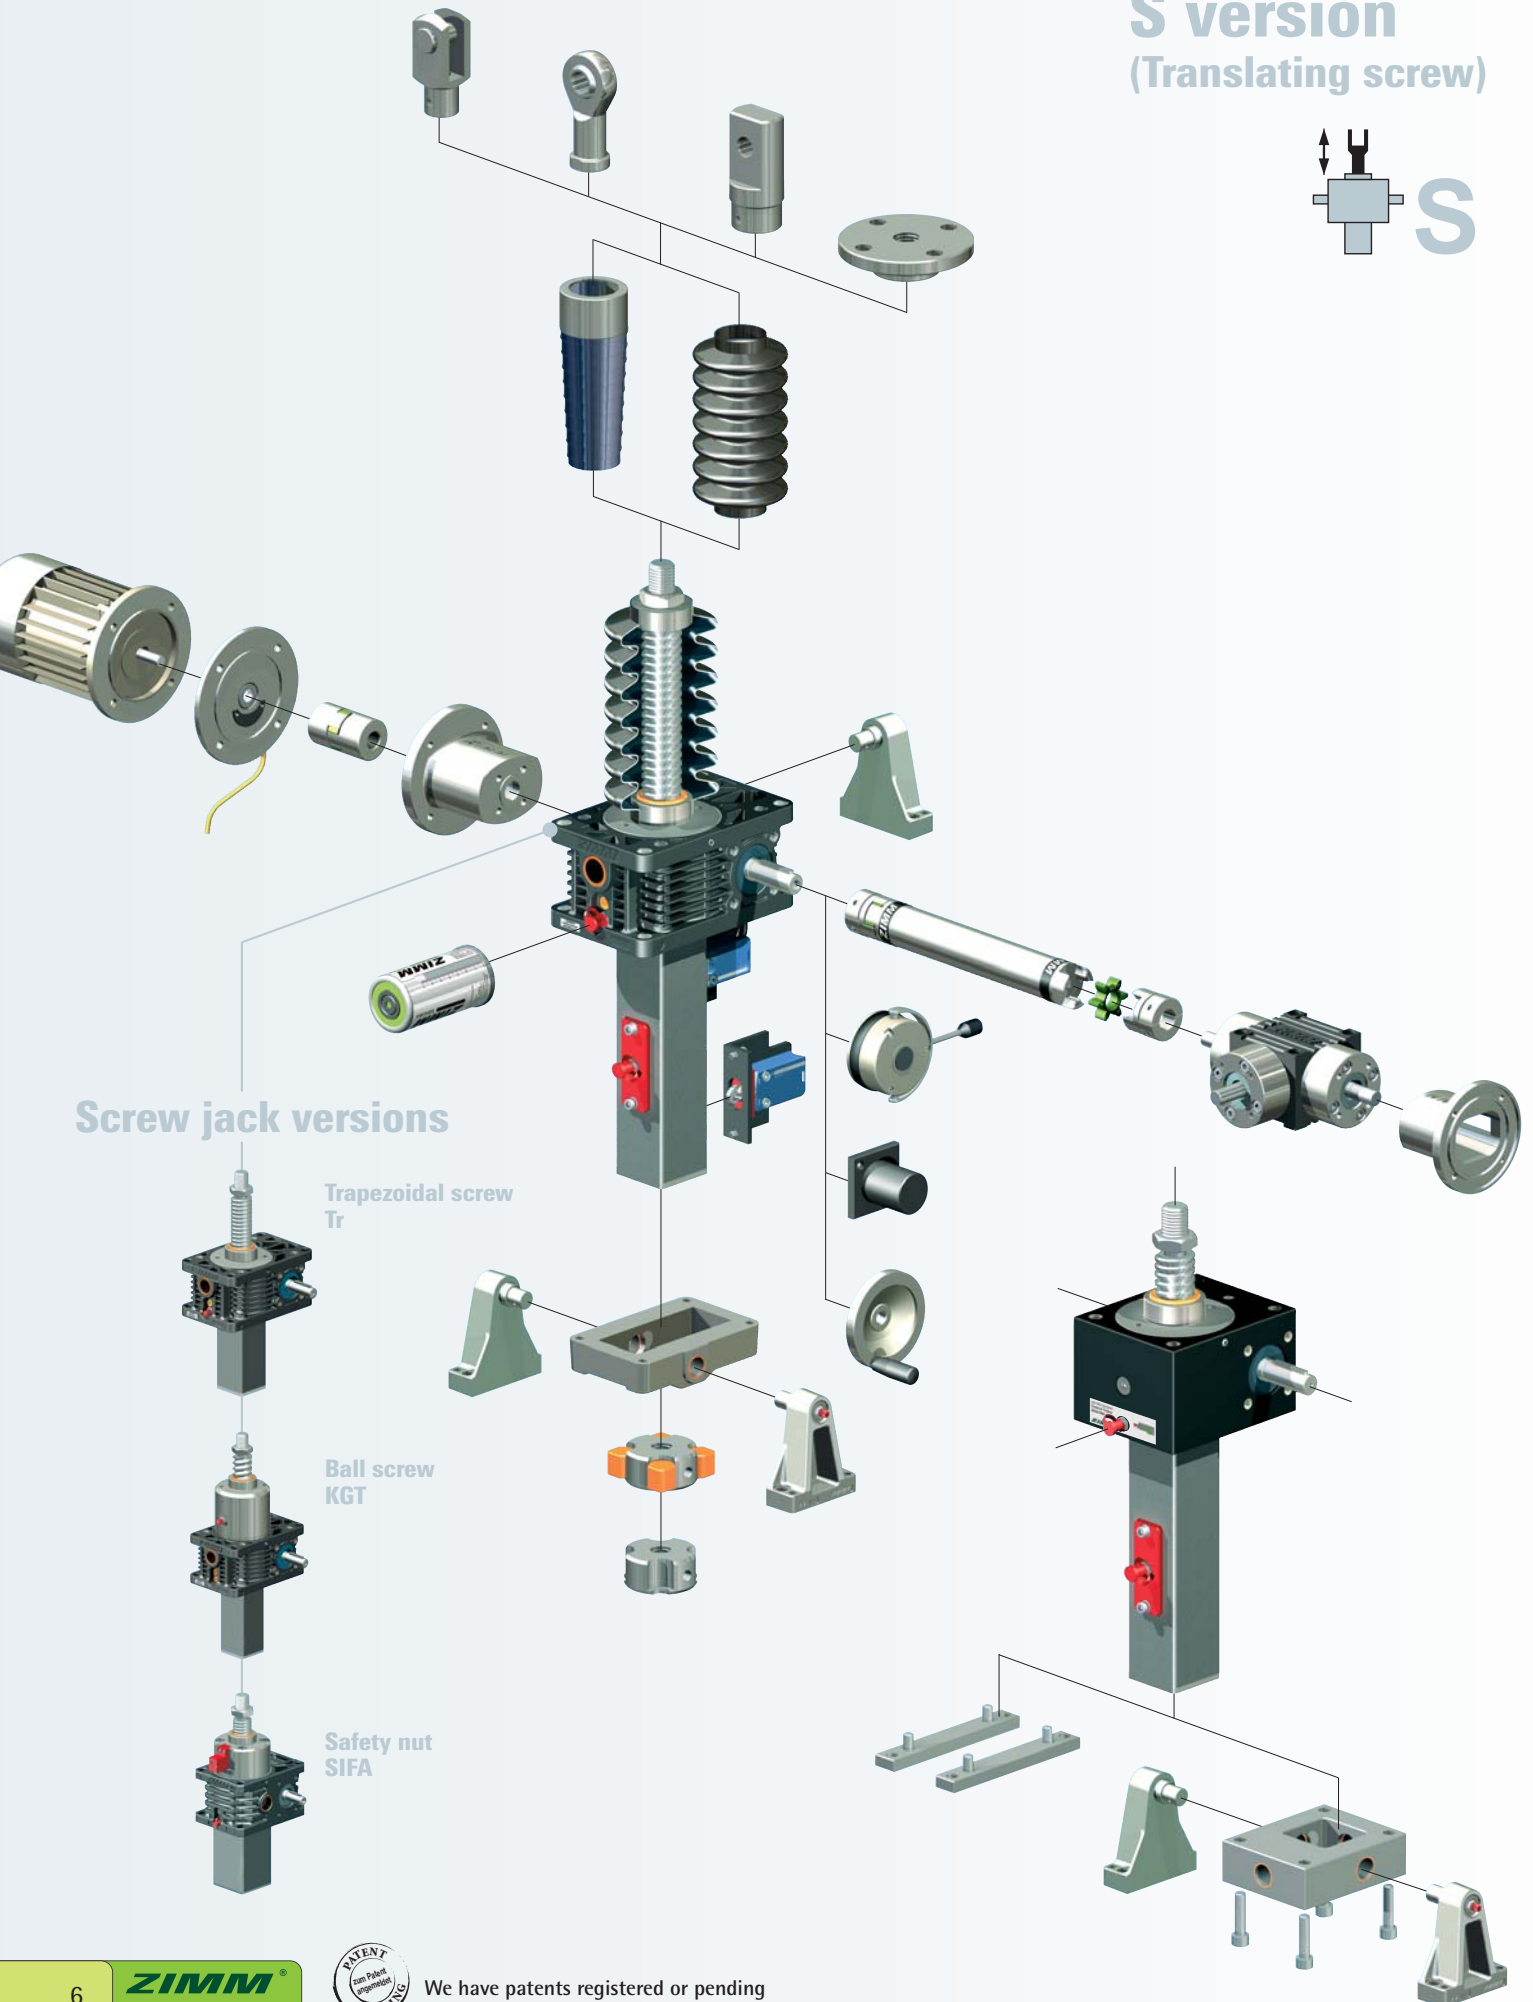

The development of ZIMM screw jack system

NOTE:

SHZ and MSZ series units made from cast iron and aluminium are available as spare parts on request. We will be happy to offer advice on conversion to the new Z and GSZ types.

Detailed instructions for determining the length can be found in Section 8

Technical data series Z-5-S / Z-5-R

max. compressive/tensile force, static	- 5 kN (0.5 t)
max. compressive/tensile force, dynamic	- see duty cycle curves
Nominal speed	- 1500 rpm
max. drive shaft speed	- 3000 rpm (depending on the load and duty cycle)
Screw size standard	- Tr 18x4 ²⁾
Gear ratio	- 4:1 (N) / 16:1 (L)
Housing material	- aluminium, corrosion-resistant
Worm shaft	- steel, case-hardened, ground
Weight of screw jack body	- 1.2 kg
Weight of screw/m	- 1.58 kg
Gearbox lubrication	- synthetic fluid grease
Screw lubrication	- grease lubrication
Gearbox operating temperature	- max. 60°C, higher on request
Moment of inertia	- N: 0.217 kg cm ² / L: 0.117 kg cm ²
Input torque (at 1500 rpm)	- max. 4.7 Nm (N) / max. 1.5 Nm (L)
Drive-through torque	- max. 39 Nm

Drive torque M_G (Nm)	- F (kN) \times 0.62 ³⁾⁵⁾ + M_L (N-normal)
Breakaway torque	- F (kN) \times 0.21 ³⁾⁵⁾ + M_L (L-low)
Idling torque ⁴⁾ M_L (Nm)	- Drive torque M_G \times 1.5
	- 0.10 (N-normal) / 0.08 (L-low speed)

Between gearbox and nut or nut and end of thread, provide for a safety distance of (minimum) 10 mm!

See Section 7 for the checklist.

Important information

- 1) - extension if a bellows or spiral spring is fitted: see the table or Section 8
- 2) - Tr 18x4 is standard, also available: double-pitch, stainless steel, left-handed, increased screw Tr 20x4 (only for the R version)
- 3) - factor includes efficiency, ratio and 30% safety
- 4) - at 20°C, can be higher when new
- 5) - for a 4 mm screw pitch

Z-10-S translating screw 10 kN

UNIQUE:

Detailed instructions for determining the length can be found in Section 8

50 kN

Technical data series Z-50-S / Z-50-R

max. compressive/tensile force, static	- 50 kN (5 t)
max. compressive/tensile force, dynamic	- see duty cycle curves
Nominal speed	- 1500 rpm
max. drive shaft speed	- 1800 rpm
Screw size standard	- Tr 40x7 ²⁾
Gear ratio	- 7:1 (N) / 28:1 (L)
Housing material	- GGG-50, corrosion-resistant
Worm shaft	- steel, case-hardened, ground
Weight of screw jack body	- 17 kg
Weight of screw/m	- 8 kg
Gearbox lubrication	- synthetic fluid grease
Screw lubrication	- grease lubrication
Gearbox operating temperature	- max. 60°C, higher on request
Moment of inertia	- N: 6.40 kg cm ² / L: 2.53 kg cm ²
Input torque (at 1500 rpm)	- max. 31.5 Nm (N) / max. 10.4 Nm (L)
Drive-through torque	- max. 260 Nm

Drive torque M_0 (Nm)	- F (kN) \times 0.68 ³⁾⁵⁾ + M_L (N-normal) - F (kN) \times 0.23 ³⁾⁵⁾ + M_L (L-low speed)
Breakaway torque	- Drive torque M_0 \times 1.5
Idling torque ⁴⁾ M_L (Nm)	- 0.76 (N-normal) / 0.54 (L-low speed)

Between gearbox and nut or nut and end of thread, provide for a safety distance of (minimum) 10 mm!

See Section 7 for the checklist.

Important information

- 1) - extension if a bellows or spiral spring is fitted: see the table or Section 8
- 2) - Tr 40x7 is standard, also available: double-pitch, stainless steel, left-handed, increased screw Tr 55x9 (only for the R version)
- 3) - factor includes efficiency, ratio and 30% safety
- 4) - at 20°C, can be higher when new
- 5) - for a 7 mm screw pitch

Z-50/Tr50-S translating screw 50 kN

UNIQUE:
Screw lubrication
during operation

i For Z-50/Tr50, use screw-related accessories from the Z-100.

Opening for protective tube SRO
square 102x102
or round Ø130

2 times to
4 times higher

Z-35 + Z-50/Tr50 heavy duty screws for long strokes

Application example
elevation axis of a
solar tracker

Heavy duty screws

The screw diameter is a critical factor in long-stroke applications. Long-stroke screws have to be oversized to prevent buckling and other problems. However, increasing the diameter of the screw means that the gearbox also has to be oversized accordingly.

To overcome this problem, the Z-35 and the Z-50/Tr50 are specially designed with stronger screws to prevent buckling on applications with long strokes. The screw does not therefore require oversizing and consequently a compact gearbox can also be used on long-stroke applications.

Z-35: with Tr 40x7 screw
Z-50/Tr50: with Tr 50x8 screw

50

kN

Technical data series Z-50/Tr50-S

max. compressive/tensile force, static	- 50 kN (5 t)
max. compressive/tensile force, dynamic	- see duty cycle curves
Nominal speed	- 1500 rpm
max. drive shaft speed	- 1800 rpm
Screw size standard	- Tr 50x8 ²⁾

See Section 7 for the checklist.

Important information

- 1) - extension if a bellows or spiral spring is fitted: see Section 8
- 2) - Tr 160x20 is standard, also available: double-pitch, stainless steel, left-handed, increased screw Tr 190x24 (only for the R version)
- 3) - factor includes efficiency, ratio and 30% safety
- 4) - at 20°C, can be higher when new
- 5) - for a 20 mm screw pitch

Ball screw KGT

Most screw jacks use trapezoidal screws Tr, because they are simple, robust and inexpensive. The proportion of screw jacks that use ball screws is however constantly increasing. The reasons for this are primarily their pitch accuracy, their high efficiency (less power consumption and less heat generation) and the higher pitches available, which permit higher stroke speeds.

Technical data KGT

Pitch accuracy

0.05 mm / 300 mm

Material: 1.1213 (Cf 53), induction hardened and polished.

No self-locking!

Because of the lack of friction, a holding brake is necessary: a motor brake or a spring pressure brake is required.

Temperatures, duty cycle

Operating temperature range -25°C to + 80°C. The duty cycle can be up to 4 times higher than for trapezoidal screws (see diagrams), and at long strokes up to 2 times higher than for trapezoidal screws.

Service life

Heavy loads reduce the service life of the KGT. Tell us the load and stroke speed and we will calculate the service life.

Contamination

All nuts are fitted with scrapers. For heavy contamination and fine dust/chips, we recommend fitting bellows or a spiral spring cover.

Escape/rotation protection

Under no circumstances may the nut be screwed off the screw. We therefore always provide escape/rotation protection on the S version.

Start ramp / braking ramp

We recommend using a frequency converter or a soft start device, especially for high lead screw jacks. This allows regulation of the start ramp / braking ramp. This ensures protection for the entire system.

Safety clearance L3 can also be reduced at your own discretion, in particular for high pitches.

Grease nipples

The standard position of the grease nipple on the S version is on the gearbox face "C". Optionally, face A is available. Faces B and D are available on request.

UNIQUE:
Ball screw lubrication
for the S version

¹⁾ An extension may be required if a bellows or spiral spring is fitted
²⁾ Dynamic load rating to DIN 69051 part 4 draft 1989

Safety nut SIFA

Function

A safety nut is designed for use where stripping and break up of the thread could cause a hazard to persons.

A safety nut can also provide protection for other equipment against the consequences of machine failures and downtimes.

Wear

Once the wear exceeds max. 25% of the screw pitch, the load nut (R) or the gearbox (S) must be replaced.

Monitoring

Wear and thread play should be checked and documented at regular intervals (depending on the duty cycle).

This allows the fitting of replacement parts to be planned ahead, reducing unscheduled system downtime.

Electrical monitoring

Electrical monitoring gives a signal when wear reaches approx. 25%. This signal can be displayed immediately at a central control point. Replacement of the worn parts can then be scheduled.

Screw jacks	Pitch P	max. permissible wear/ thread play* (25% of P)
[TrØxP]	[mm]	[mm]
Tr16x4, Tr18x4, Tr20x4	4	1.0
Tr30x6	6	1.5
Tr40x7	7	1.75
Tr50x8	8	2.0
Tr55x9, Tr60x9	9	2.25
Tr80x16, Tr100x16, Tr120x16	16	4.0
Tr140x20, Tr160x20	20	5.0

max. 25% wear

* Identical for double pitch screws (same thread flank thickness)

We have patents registered or pending for a range of functions and components.

SIFA-S translating screw

Function S version

The load is borne by the worm wheel via the screw. If the worm wheel screw thread wears through, the SIFA restrains the screw. The load remains supported.

Direction of loading, compressive and tensile
The new SIFA-S operates equally in both compressive and tensile directions of loading!

¹⁾ See Section 8 for extension if bellows or spiral spring is fitted

SIFA-S, monitoring

Visual

Monitoring

Wear should be checked and documented at regular intervals. This allows the fitting operation for replacement to be planned in good time so as to avoid system downtime.

OK
Wear still <25% of P

CAUTION!
max. permissible wear reached –
Replace the gearbox

STOP!
Wear >25% or thread already worn through –
Stop operation immediately!

Electrical

WARNING! Switch S1
At 25% wear the limit switch S1 trips.
The customer must detect this signal.
This enables substitution to be planned well
in advance and therefore prevents any
unnecessary downtime.

STOP! Switch S2
If after the first signal operation of the jack
continues, the nut will continue to wear until
the thread is worn through. When the thread
is worn through, the safety nut takes the load.
The limit switch S2 trips.
The customer must detect this signal and
stop the system.

Without any monitoring

If the version used has no monitoring,
the dimension A must be measured and
documented when new, then regularly
checked and documented.

SIFA-R rotating screw

Function R version

The load is borne by the duplex nut. The safety nut runs alongside the duplex nut, bearing no load. If the nut thread is worn through due to wear, the SIFA takes the load.

Direction of loading, tensile or compressive
A drawing showing the direction of loading is necessary in order to ensure the safety function. The SIFA-R operates in only one direction of loading.

- further technical information: Page 51
- see the respective screw jack page for all other dimensions
- see Section 4 for accessories
- SIFA in combination with self-aligning nut PM available on request

¹⁾ see Section 8 for extension if bellows or spiral spring is fitted
²⁾ approx. original setting, must be measured and documented by the customer, and referred to when checking

Make sure you fit it the right way up:

SIFA-R, monitoring

Visual

Dimension A is approx. the original setting. Dimension A must be measured and documented by the customer, and referred to when checking. This enables substitution to be planned well in advance and therefore prevents any unnecessary downtime. When the thread is worn through, take the equipment out of service immediately.

Electrical

The initiator must be set that it switches off when the load nut reaches 25% of the wear. This enables a replacement to be planned well in advance and therefore prevents any unnecessary downtime. When the thread is worn through, take the system out of service immediately.

GSZ series

GSZ series screw jacks are designed for applications where smooth surfaces are required. These screw jacks are easier to clean and therefore ideal for applications in the food processing industry.

2x Z-50-FB-1500	-				

Detailed instructions for determining the length can be found in Section 8

50 kN

Technical data series GSZ-50-S / GSZ-50-R

max. compressive/tensile force, static	- 50 kN (5 t)
max. compressive/tensile force, dynamic	- see duty cycle curves
Nominal speed	- 1500 rpm
max. drive shaft speed	- 1800 rpm (depending on the load and duty cycle)
Screw size standard	- Tr 40x7 ²⁾
Gear ratio	- 7:1 (N) / 28:1 (L)
Housing material	- GGG-50, corrosion-resistant
Worm shaft	- steel, case-hardened, ground
Weight of screw jack body	- 15 kg
Weight of screw/m	- 8 kg
Gearbox lubrication	- synthetic fluid grease
Screw lubrication	- grease lubrication
Gearbox operating temperature	- max. 60°C, higher on request
Moment of inertia	- N: 6.40 kg cm ² / L: 2.53 kg cm ²
Input torque (at 1500 rpm)	- max. 31.5 Nm (N) / max. 10.4 Nm (L)
Drive-through torque	- max. 260 Nm

Drive torque M_0 (Nm)	- F (kN) \times 0.68 ³⁾⁵⁾ + M_L (N-normal)
Breakaway torque	- F (kN) \times 0.23 ³⁾⁵⁾ + M_L (L-low speed)
Idling torque ⁴⁾ M_L (Nm)	- Drive torque M_0 \times 1.5
	- 0.76 (N-normal) / 0.54 (L-low speed)

Between gearbox and nut or nut and end of thread, provide for a safety distance of (minimum) 10 mm!
See Section 7 for the checklist.

Important information

- 1) - extension if a bellows or spiral spring is fitted: see the table or Section 8
- 2) - Tr 40x7 is standard, also available: double-pitch, stainless steel, left-handed, increased screw Tr 55x9 (only for the R version)
- 3) - factor includes efficiency, ratio and 30% safety
- 4) - at 20°C, can be higher when new
- 5) - for a 7 mm screw pitch

UNIQUE:
Screw lubrication
during operation

GSZ-100-S translating screw 100 kN

1) Fitting height "Y" for 0-stroke, with Tr 55x9 screw

All dimensions in mm

Bellogs FB	Y	Y	Y	Y	Y
without bellogs FB	238	288	382	380	346
Z-100-FB-285	311	313	455	453	371
Z-100-FB-600	308	310	452	450	368

Without escape/ rotation protection	Escape/ rotation protection	Rotation protection, with limit switch set ES	Rotation protection with ES and KAR*
82+stroke	112+stroke	144+stroke	189+stroke

*Hinged bearing plate KAR, fitted on face F (below)

Standard ratios

Type	Version	Speed	Standard screw ²⁾	i	Stroke per drive shaft rotation ⁵⁾
GSZ-100-SN	Translating	Normal	Tr 55x9	9:1	1.00 mm
GSZ-100-SL	screw	Low speed		36:1	0.25 mm
GSZ-100-RN	Rotating	Normal	Tr 55x9	9:1	1.00 mm
GSZ-100-RL	screw	Low speed		36:1	0.25 mm

Screw jack mounting

- max. load: 100 kN compressive and tensile load
- Screw: M16, strength class 8.8
- Screw-in depth: 16 to 22 mm
- Tightening torque: 82 Nm
- Screw locking: with Loctite 243

Duty cycle thermal limit, for S+R

These curves are for guidance under standard industrial conditions (ambient temperature etc.) and correct maintenance (lubrication etc.). The max. input drive torques for optimum service life are at the right page - technical data (1500 rpm)

KGT:
% duty cycle
2 times to
4 times higher

Ball screw KGT

Most screw jacks use trapezoidal screws Tr, because they are simple, robust and inexpensive. The proportion of screw jacks that use ball screws is however constantly increasing. The reasons for this are primarily their pitch accuracy, their high efficiency (less power consumption and less heat generation) and the higher pitches available, which permit higher stroke speeds.

Technical data KGT

Pitch accuracy

0.05 mm / 300 mm

Material: 1.1213 (Cf 53), induction hardened and polished.

No self-locking!

Because of the lack of friction, a holding brake is necessary: a motor brake or a spring pressure brake is required.

Temperatures, duty cycle

Operating temperature range -25°C to + 80°C. The duty cycle can be up to 4 times higher than for trapezoidal screws (see diagrams), and at long strokes up to 2 times higher than for trapezoidal screws.

Service life

Heavy loads reduce the service life of the KGT. Tell us the load and stroke speed and we will calculate the service life.

Contamination

All nuts are fitted with scrapers. For heavy contamination and fine dust/chips, we recommend fitting bellows or a spiral spring cover.

Escape/rotation protection

Under no circumstances may the nut be screwed off the screw. We therefore always provide escape/rotation protection on the S version.

Start ramp / braking ramp

We recommend using a frequency converter or a soft start device, especially for high lead screw jacks. This allows regulation of the start ramp / braking ramp. This ensures protection for the entire system.

Safety clearance L3 can also be reduced at your own discretion, in particular for high pitches.

Grease nipples

The standard position of the grease nipple on the S version is on the gearbox face "C". Optionally, face A is available. Faces B and D are available on request.

We have patents registered or pending for a range of functions and components.

UNIQUE:
Ball screw lubrication
for the S version

GSZ-5 to GSZ-100, KGT-S translating screw

²⁾ Dynamic load rating to DIN 69051 part 4 draft 1989.
³⁾ Round flange.

⁴⁾ Non-preferred design.
⁵⁾ Reduced play 0.02 mm available on request.
⁶⁾ Not to DIN 69051.

Safety nut SIFA

Function

A safety nut is designed for use where stripping and break up of the thread could cause a hazard to persons.

A safety nut can also provide protection for other equipment against the consequences of machine failures and downtimes.

Wear

Once the wear exceeds max. 25% of the screw pitch, the load nut (R) or the gearbox (S) must be replaced.

Monitoring

Wear and thread play should be checked and documented at regular intervals (depending on the duty cycle).

This allows the fitting of replacement parts to be planned ahead, reducing unscheduled system downtime.

Electrical monitoring

Electrical monitoring gives a signal when wear reaches approx. 25%. This signal can be displayed immediately at a central control point. Replacement of the worn parts can then be scheduled.

Screw jacks	Pitch P	max. permissible wear/ thread play* (25% of P)
[TrØxP]	[mm]	[mm]
Tr16x4, Tr18x4, Tr20x4	4	1.0
Tr30x6	6	1.5
Tr40x7	7	1.75
Tr 55x9	9	2.25

* Identical for double pitch screws (same thread flank thickness)

max. 25% wear

We have patents registered or pending for a range of functions and components.

SIFA-S translating screw

Function S version

The load is borne by the worm wheel via the screw. If the worm wheel screw thread wears through, the SIFA restrains the screw. The load remains supported.

Direction of loading, compressive and tensile
The new SIFA-S operates equally in both compressive and tensile directions of loading!

SIFA-S, monitoring

Visual

Monitoring

Wear should be checked and documented at regular intervals. This allows the fitting operation for replacement to be planned in good time so as to avoid system downtime.

OK

Wear still <25% of P

CAUTION!

max. permissible wear reached –
Replace the gearbox

STOP!

Wear >25% or thread already worn through –
Stop operation immediately!

Electrical

WARNING! Switch S1

At 25% wear the limit switch S1 trips. The customer must detect this signal. This enables substitution to be planned well in advance and therefore prevents any unnecessary downtime.

STOP! Switch S2

If after the first signal operation of the jack continues, the nut will continue to wear until the thread is worn through. When the thread is worn through, the safety nut takes the load. The limit switch S2 trips. The customer must detect this signal and stop the system.

Without any monitoring

If the version used has no monitoring, the dimension A must be measured and documented when new, then regularly checked and documented.

SIFA-R rotating screw

Function R version

The load is borne by the duplex nut. The safety nut runs alongside the duplex nut, bearing no load. If the nut thread is worn through due to wear, the SIFA takes the load on the duplex nut.

Direction of loading, compressive or tensile
A drawing showing the direction of loading is necessary in order to ensure the safety function. The SIFA-R operates in only one direction of loading.

- further technical information: Page 75
- see the respective screw jack page for all other dimensions
- see Section 4 for accessories
- SIFA in combination with self-aligning nut PM available on request

SIFA-R, monitoring

Visual

Dimension A is approx. the original setting. Dimension A must be measured and documented by the customer, and referred to when checking. This enables substitution to be planned well in advance and therefore prevents any unnecessary downtime. When the thread is worn through, take the equipment out of service immediately.

Electrical

The initiator must be set that it switches off when the load nut reaches 25% of the wear. This enables a replacement to be planned well in advance and therefore prevents any unnecessary downtime. When the thread is worn through, take the system out of service immediately.

Rotation protection VS

Material: *Steel, bronze
Rotation protection is required if the screw is
not fixed to the load so that it cannot rotate,
or is installed in combination with limit
switches or the rod end KGK.

Part no.	A	B	G	M	kg
GSZ-2-VS*	31x21	15	Ø3	M10	0.01
Z-5-VS*	31	15	M6	M12	0.10
Z-10-VS	46	20	M8	M14	0.23
Z-25-VS	46	20	M8	M20	0.23

*for Z-5 the rotation protection is of solid bronze; GSZ-2 POM

Escape protection AS

Material: Steel
Escape protection prevents the screw being
wound out of the gearbox. It is particularly
recommended for ball screws. Do not rely on
it as an operating travel stop.

Part no.	B	G	M	kg
GSZ-2-AS	15	M5	M10	0.01

Limit switch set

Product features

Technical data

Type:	mechanical limit switch with positively-actuated NC relay
Material:	metal housing and roller plunger
Mode of operation:	1NC + 1NO, snap action contacts
Protection class:	IP67
Temperature range:	-35°C to +85°C
Cable:	PVC black Ø 7.3 mm, 5 x 0.75 mm ²
Electrical duty:	max. 240V AC / 1.5A max. 250V DC / 0.1A
Electrical service life:	5 million DC switching operations at 24V DC/3W 1 million AC switching operations at 230V AC/0.5A

Limit switch position

Ordering code

(only A and C permissible for GSZ-2)

Ordering example:
1 off Z-25-ES-5-G-A
1 off Z-25-ES-5-E-A

Ordering code for limit switch set:

Z-25-ES-5-G-A

Gearbox size
Cable length
2m, 5m (standard) or 10m
Installation
G = gearbox face (standard)
E = end of the protective tube (standard)
S = special position, S = ?? mm
V = set pre-assembled
Limit switch position
A (standard), B, C or D

Datasheet with all technical details on request.

Ordering code for an single switch:

Z-25-ES-5

Cable length
2m, 5m or 10m, 0 = without cable

Pivoting support tube STRO

Axis of pivoting

Max. stroke for this type: 500 mm!

When using the pivoting support tube, take into consideration the torques arising due to the weight of the motor etc. - support is necessary!

Fixing:
see pages 154, 159

Ordering example:

(Support tube): Z-25-STRO-P, GS=150mm

For a bellows extension, see Section 8 - Length Calculation

Nuts for rotating version R

Flange nut FM
Standard nut for simple applications

Duplex nut DM
- Bellows can be attached both sides
- Uniform \varnothing on gearbox neck, nut and opposed bearing plate
- Grease nipple or connection to central lubrication or lubricator (page 120)

Safety nut SIFA
In combination with duplex nut or self-aligning nut.
For function and application see Sections 2+3

Self-aligning nut PM
- Angular compensation up to max. 3°
- Bellows can be attached both sides
- Uniform \varnothing on gearbox neck, nut and opposed bearing plate
- Grease nipple or connection to central lubrication or lubricator (page 120)

Greaseless nut FFDM
- Specially suitable for dry running (such as textiles, foodstuffs, chemicals,...)
- Bellows can be attached both sides
- Reinforced with a stainless steel washer

Flange nut Z-..-FM

* Supplied ex-works with size A2max.
Can be machined by the customer to A2min.

** Suitable also for GSZ-2-FM (Tr 16x4)

Material: steel, corrosion-resistant

Nuts for rotating version R

Self-aligning nut Z-...-PM

Advantage

- Angular compensation up to $\pm 3^\circ$
- Grease nipple or connection thread to central lubrication
- Bellows can be connected

Application:

(Welded) fabrications often exhibit angular errors, which lead to rapid wear of the trapezoidal screw nuts. The self-aligning nut PM can compensate small angular errors on the attachment face up to maximum $\pm 3^\circ$. A large grease reservoir increases the maintenance intervals and extends the service life.

CAUTION:

Self-aligning nuts cannot compensate parallelism errors between screws or between screws and guides. Take care to ensure precise alignment. The attachment faces for the gearboxes must therefore be exactly at right angles to the guides.

The opposed bearing plate increases the smoothness of operation and the resistance of the screw to buckling.
 Allow 5 mm at the end of the screw for length compensation.

Fitting the bellows

The bellows protect the screw against dirt and moisture.

PLEASE NOTE:

The bellows must not be compressed to less than the ZD dimension nor extended beyond the AZ dimension.

If the stroke is longer than 1000 mm, fit a bellows with an extension block. Take into consideration that when the bellows is fitted

horizontally it must not touch the screw: Risk of serious damage! Use support rings to avoid such damage.

Protect the screws, especially during on-site assembly, against: building site dust, grinding dust from angle grinders,

weld spatter, etc. Protect the bellows against direct sunshine.

Take into consideration also that the thermal insulation effect of the bellows reduces the maximum duty cycle of the screw jack.

**Bellows Z-...-FB, round**

Z-350-FB-1500	15	145	180	1680	1500	150	200	1.10

IMPORTANT! When ordering, please specify:
When mounted horizontally, the bellows must be fitted with suitable support rings, so as to avoid wear due to rubbing against the trapezoidal thread of the screw.
For lengths longer than 1000 mm, an extension block is necessary.
Compatible with the previous MSZ types

Bellows fixing ring
Z-..-FBR

The fixing ring FBR is used to secure the bellows FB to the forked end GK or rod end KGK. Identical to the previous MSZ types

If a forked end GK or rod end KGK is included in the scope of the order, the fixing ring is supplied automatically.
Otherwise, please order it separately.

Ordering example:

Spiral spring attachment

Spiral spring cover attachment for types SN/SL

Spiral spring cover attachment for types RN/RL

Fitting instructions:

Spiral springs can be used on chip-generating and non-chip generating machines.

The illustrations show how to fit different types of spiral spring covers to various screw jacks.

Centring bushings are required when assembling combinations of different parts; we can include these in our quotation on request.

IMPORTANT:

Spiral springs must under no circumstances be allowed to uncoil. For technical reasons, please specify in your enquiry whether the spiral spring is to be installed horizontally or vertically.

If installation is to be vertical, we recommend that the larger diameter is at the top,

as shown; if it is to be horizontal, the taper should be away from the direction of flow of the chips or other particulate.

A slight film of oil on the spiral spring improves its operation and extends its service life.

Spiral spring cover SF

**Material:**

SF: Spring band steel, blued (on request we can also supply versions in stainless steel)

Centring bushing: Plastic (other materials on request)

CAUTION:

The spring travel quoted is the maximum possible. For practical operation, please allow a margin of safety to prevent damage! We recommend preparation of a drawing to determine the fitting position and dimensions of spiral springs.

Z-25 (Z-25-LB)	20	25	13	8	105	21	105	85	78	100	1.30

Integrated pivot bearing

Simple and economical design:
Pivot bushes are incorporated in the gearbox housing.

Lubrication

The bronze bushes are PTFE-coated and therefore require no lubrication in normal service. We recommend regular lubrication for high loadings.

Design tip

For large motors, long strokes and high load cycles, the variant with the pivot bearing plate KAR is preferable, because the weight of the motor is then taken by the pivoting points and does not affect the screw.

F Refer to the permissible loads listed in Section 8

Material: Aluminium, corrosion-resistant
Bolt: Stainless steel

Part no.:
Z-5/10-LB set (2 items)
Z-25-LB set (2 items)

Pivot bearing plate KAR

Dimensions	B1	B2	B3	B9	B10	C4	C5	C6	C7	D1	D3
Z-5-KAR	40	25	10	15	15	166	146	116	74	16	11

Z-25-KAR	8	105	21	20	32	40	105	85	138	0.80

Multi-jack systems

The KAR pivot bearing plate allows several jacks to be arranged in a row.

Lubrication

The bronze bushes are PTFE-coated and therefore require no lubrication in normal service. We recommend regular lubrication for high loadings.

Part no.:
Z-5-KAR
Z-10-KAR
Z-25-KAR

Please specify: mounted on face E or face F

Pivoting – Z-35 to Z-1000

Pivot mounts LB

Axis of pivoting P
(parallel to the drive)

Material: Cast steel, quenched and tempered, corrosion-resistant

From Z-500 the gearbox is mounted the opposite way round, since the footplate is broader than the rest of the housing:

Dimensions	D1	D3	D4	H1	H2	L1	L2
Z-35-LB	28	11	8	85	18	130	106
Z-50-LB	30	13	10	110	18	170	140

Integrated pivot bearing

Simple and economical design:

Pivot bushes are incorporated in the gearbox housing.

Lubrication

The bronze bushes are PTFE-coated and therefore require no lubrication in normal service. We recommend regular lubrication for high loadings.

Part no.:

Z-50-LB set
(1x right-handed, 1x left-handed)

Refer to the permissible loads listed in Section 8

Pivot bearing plate Z-35-KAR

Axis of pivoting R
(at right angles to the drive)

Material: GGG-50

Pivot bearing plate from Z-35

The use of the pivot mounts LB directly within the gearbox housing is the best and most economical solution. Design considerations may in some cases necessitate the use of a pivot bearing plate.

Other sizes of pivot arrangements "R" and "P" are available on request.

Part no.:

Z-35-KAR

For the S and R version

The max. torque is limited either by the star or by the clamping force

Shafts with split shells

- Split shells permit easy radial insertion
- High concentricity
- High clamping forces
- Low moment of inertia

- Stepless adjustment facility thanks to the clamp hub rather than a fitted drive key
- Drive keyway available on request
- Material: High-tensile aluminium (stainless steel on request)

Elastomer star

- Permanently free of play, dampens vibration
- Shore hardness 64D
- Colour: ZIMM green
- Temperature range: 0°C to +70°C reduced to -20°C, to +100°C (Mx0.55)

VWZ-100	97	65	2	2	50	50	251

*BK=shaft extension clamping length

Pedestal bearing: YES/NO?

The installation situation is very important when selecting shaft dimensions. For example, the cost of a larger diameter connecting shaft not requiring additional pedestal bearing support can be considerably less than the cost of a smaller connecting shaft requiring costly sub-structures for the additional pedestal bearing.

For this version we use the rigid hub version so that no radial misalignment can occur in the pedestal bearing.

STL-50-G	50	54	114.5	57.2	22	149	165	203	18	32.6	2.70

We use high-quality pedestal bearings.
Housing material: Grey cast iron, primed in blue
Bearing material: Roller bearing steel
Temperature range: -30°C to +120°C

Pedestal bearings of plastic "black" or "white" (foodstuffs applications) on request.
CAUTION: Dimensions may change!

Shaft extension

Material: Steel, ground

Part no.	d1	Lwz	kg
WZ-15/74-?P	15	74	0.10
WZ-20/76-?P	20	76	0.19
WZ-20/102-?P	20	102	0.25
WZ-30/130-?P	30	130	0.72
WZ-40/170-?P	40	170	1.67
WZ-50/170-?P	50	170	2.61

Examples:

VWZ with rigid hub, for pedestal bearings

Pedestal bearing with handwheel for driving the VWZ shaft

Shaft extension without fitted key (OP)

Shaft extensions with fitted key at one end (1P)

ZIMM VWZ shafts of 500 mm length and more are checked for concentricity as standard!

Standard coupling KUZ

Coupling with keyway and set screw

- standard coupling with keyway and set screw
- provides rotational resilience
- maintenance-free
- material: as shown in the table

Elastomer star

- material: Polyurethane
- medium to good damping
- very good long-term strength
- temperature range: 0°C to +70°C reduced to -30°C, up to +100°C (Mx0.55)

Technical data

Clamp coupling KUZ-KK

*BK=shaft extension clamping length

Coupling with split shells

- Split shells permit easy radial insertion
- High concentricity
- High clamping forces
- Low moment of inertia
- Stepless adjustment facility thanks to the clamp hub rather than a fitted drive key
- Keyway available on request
- Material: high-tensile aluminium

Standard bores "d" [mm]

KUZ-KK-16	8, 9, 10, 11, 12, 14, 15, 16
KUZ-KK-24	9, 10, 11, 12, 14, 15, 16, 18, 19, 20, 22

¹⁾ incl. spring washers

²⁾ incl. nuts and spring washers

³⁾ set screws 8.8 with nuts and spring washers

⁴⁾ from size 225 check the shaft diameter, it can vary depending on the motor (these diameters should be suitable for 4, 6 and 8-pole motors)

Motor flange for Z-750 and Z-1000 on request

Overview

Three-phase AC motor

Three-phase AC motor with brake

Three-phase AC motors, three-phase AC motors with brakes

Standard three-phase motors (asynchronous)
 No-load speed ~ 1500 rpm (other speeds on request)
 230/400 V Δ 50 Hz, S1 or S3-75%, ISO F
 Three-phase AC motors: IP 55
 Three-phase AC motors with brakes: IP 54

Voltage ranges

220 - 240 V Δ 50 Hz

380 - 415 V Δ 50 Hz

440 - 480 V Δ 60 Hz

380 - 415 V Δ 50 Hz

660 - 690 V Δ 50 Hz

440 - 480 V Δ 60 Hz

*Power is higher than the IEC standard (progressive)

Sizes 63 to 132 available on short lead times
 Sizes 160 to 355 available on request

CAUTION:

Overdimensioning the motor power risks overstressing other components. The effects must be considered not only under load but also for the no-load case.

We supply motor brakes as standard for a connection voltage of 230V AC, operating voltage 205 V DC, with bridge rectifiers.

Ordering example:

90-P4-1.5-B5-B-2W

Size
 Number of poles - speed
 4-pole = 1500 rpm
 Power [kW]
 Design
 with brake (if required)
 with a second shaft end (if required)

Three-phase AC motors, general information

Connection arrangement

The motors usually have a terminal board with 6 terminals and a protective earth terminal in the terminal box. The stator winding can be switched into star or delta connection using the connection links.

Star/delta starting is not suitable for screw jack systems because full torque is required immediately on starting.

Operating voltage 230 V delta:

Motor windings 230/400 V

Operating voltage 400 V delta:

Motor windings 400/660 V

Direction of rotating

Motors can be arranged for either direction of rotation. When the line phases L1, L2, L3 are connected to the motor terminals U1, V1, W1, the direction of rotation is clockwise.

Swapping over two of the supply lines reverses the direction of rotation.

Speeds

Three-phase AC motors have different rotational speeds depending on the number of poles. Generally we recommend our standard motor with 1500 rpm (4 poles).

Other numbers of poles are available on request. Pole-changing motors allow a choice of 2 different rotational speeds.

Speed (50 Hz)	Number of poles
3000	2
1500	4 (= preferred type)
1000	6
750	8
500	12

Geared motors

Geared motors are available for particular projects on request.

Operation with frequency converters

Especially for larger screw jacks and systems, we recommend the use of a frequency converter to achieve smooth start-up and brake ramps. This minimizes start-up noise and extends the service life of the gearbox.

When operating with a frequency converter, remember that if the motor is to be operated for extended periods at frequencies less than 25 Hz, its fan must be driven separately. This is necessary to ensure adequate motor cooling.

When operating a braked motor with a frequency converter, a separate actuation line for the brake must be provided via the frequency converter.

Braked motor

We recommend using a braked motor to minimise the overrun time of the system. Where a screw jack is fitted with a ball screw or a double-pitch screw, a braked motor is absolutely essential. We supply motor brakes as standard for a connection voltage of 230V AC / operating voltage 205 V DC, with bridge rectifiers.

Other connection voltages (24V DC, 400V AC, 500V AC) are available on request.

Temperature monitoring

Generally we do not supply temperature monitoring because screw jack duty cycles are normally quite low or the motor is adequately dimensioned.

Temperature control thermal resistor (PTC) or bimetal (TKÖ) is available on request.

Some types are available ex stock with thermal resistor (PTC).

Permanent-magnet DC motors

24V DC, IP 54, with terminal box

Frame size IEC	Power [P]	Speed [rpm]	Rated torque*** [Nm]	Starting torque [Nm]	Voltage [V]	Rated current [A]	Motor length (without shaft)	Weight [kg]
Ø53	60W	3000	0.17	1.4	24V DC	2.9	128	1.2

These dimensions are our standard (4-pole), but may vary in individual cases.

Three-phase AC motors, three-phase AC motors with brakes, pedestal mounted type B3

For this type, we can supply a flanged motor (e.g.: B14) with additional pedestal mounts fitted. This version is generally available on a shorter lead time. The dimensions remain the same.

Please specify the terminal box position (top, right or left when looking at the motor shaft). If not otherwise specified, we deliver up to size 112 with the box on top and from size 132 with it on the right.

i We reserve the right to change the dimensions without changing the motor designation.

Rotary pulse encoder DIG

We have developed an intelligent intermediate flange which greatly simplifies recording speed and direction of rotation as well as connecting to supervisory control system. Previously this required complex assembly and additions to the drive system; the intelligent flange achieves this economically and is very easy to fit, even when retrofitting drives.

This magnetic pulse encoder is fitted as an intermediate flange between motor and motor flange. This considerably simplifies the integration of incremental encoders in drive systems, whether for purposes of speed matching, of positioning control (e.g. for dosage control) or for synchronisation. We supply a 2 m cable as standard.

Advantages

- Compact design (7 to 12 mm thick)
- Simple and quick assembly
- Protected between motor and motor flange
- Protection class IP 20, with appropriate seal IP67
- Universal HTL signal for all conventional evaluations (PNP, NPN, PNP-NPN, RS 422) or TTL
- Short-circuit proof, protected against polarity reversal and protected against overvoltage transmitter electronics in SMT technology; fully integrated into the flange

$$\text{For DC: } P = U \cdot I \rightarrow I = \frac{P}{U}$$

e.g.: FDB 17 at 205 V DC coil voltage

$$I = \frac{50W}{205V} = 0.24 \text{ A}$$

Spring pressure brake FDB

Function

A spring pressure brake is used:

- when there is a lack of self-locking characteristics (high-pitch, double-pitch screws, ball screws KGT)
- where self-locking characteristics are doubtful (as a safety precaution)
- for increased accuracy of stopping position, independent of the lubrication situation

General

The braking torque is generated by compression springs when the brake is deenergised. The brake is released electromagnetically by the application of DC voltage. The protective rings shield the friction faces from external influences. The standard version has protection class IP 54.

Mode of operation

The compression springs (3) exert force on the armature disc (4) which is free to move axially and which presses the brake rotor (5) against the flange (6). The brake rotor in turn is tightly mounted on the hub (2).

The shaft is then braked. Application of DC voltage to the field windings (1) in the magnetic body generates a magnetic force which pulls the armature disc towards the magnetic body. The brake rotor is freed and the brake is released.

In the event of an emergency stop or a power failure, the spring pressure brake ensures that the load is safely braked to a stop.

Electrical supply

The spring pressure brake requires a DC supply. Half-wave and bridge rectifiers are available to provide the power supply to the brakes from the AC mains supply.

Because of the inductance of the solenoid coil, the release of the armature disc on loss of power is not immediate. When the switching off takes place in the AC line from the rectifier, this delay is relatively long.

The delay in switching off can be reduced if the connections available between the rectifier are used to switch the DC line (6 times faster).

If the switching is performed on the AC side, a bridge should be made to the switch contacts.

Manual release

If a manual release lever is fitted, the brake can be released mechanically, e.g. in the event of a power failure.

Brake voltage

The brake voltage is derived from the mains phase voltage. For braked motors, the brake voltage is generally derived from the motor voltage in delta arrangement. The operating voltage of the brake is indicated on the solenoid casing.

Supply voltage	Brake operating voltage	Rectifier
24V DC	24V DC	-
230V AC	205V DC	GLB Bridge rectifier (PMB 400-S)
230V AC 400V AC 500V AC	105V DC 180V DC 220V DC	GLE Half-wave rectifier (KSE 500/1-S)

 All parts are corrosion-resistant!

Ordering example:

Brake size
Brake operating DC voltage
Rectifier type (if required)
Manual release HL (if required)

Z-25-FDB 10-205V DC-GLB-HL

Lubrication - screw

Lubricants

Always use the correct lubricants for a long service life!

These lubricants have been carefully selected to suit the screw jack requirements.

Caution should be exercised in using other greases! A "good" grease may not always be the "right" grease.

Trapezoidal screw

Inspect the trapezoidal screw regularly and regrease it depending on the operating cycle. Use the grease that we recommend. These greases are ideally matched to the operating requirements of our screw jack systems.

Standard grease:

Castrol Tribol 4020/460-2 (up to size 150)
Castrol Tribol 3020/1000-2 (from size 250)

As well as the standard greases we also offer greases for special applications:

- High temperature/high duty cycle
- Low temperature
- Heavy duty
- Food industry
- Clean room
- Vacuum, etc.

Most greases are available ex stock. The exact application and the load cycles are important when making the selection. The best strategy is to send us the completed enquiry checklist (Section 7).

The important question is whether it matches the respective requirements.

Ball screw KGT

Lubricate the ball screw KGT every 300 hours of effective operation. For heavy-duty systems every 100 hours.

Grease quantity:

Guidance value approx. 1 ml per cm screw diameter.

Standard grease:

Castrol Tribol 4747/220-2

Ordering example:

Castrol Tribol 4020/460-2,
Cartridge 400g

Automatic lubricator Z-LUB

The ZIMM lubricator Z-LUB continuously supplies the screw with lubricant.

The Z-LUB is activated when the run-time is set (1 to 12 months at 20°C) (gas generation cell).

The filling level can be viewed all the time in the transparent housing.

Metering time:	1 to 12 months, infinitely adjustable
Volume:	125 ml
Operating temperature:	+5°C to +55°C (standard grease, mineral-based) for synthetic greases down to -20°C
Thread:	G1/4"
Greases:	ZIMM screw greases

Ordering example:

Z-LUB, ZIMM lubricator
Filling: Castrol Tribol 4020/460-2

Ordering example:

Reducer to G 1/8":
Part no. MSZ-SG-RS1

Infinitely adjustable from 1 to 12 months metering time

KSZ and KGZ – Advantages

Same mounting height – no support plates required

ZIMM bevel gearboxes KSZ and KGZ have the same installation height as the ZIMM screw jack gearbox.

No support plates are required.

Suitable for standard – motor flanges

Bevel gearboxes and screw jack gearboxes have the same motor flange fixing pattern.

See Section 4 for standard flanges.

Bevel gearboxes

KSZ-2 layout examples

The KSZ-2 is a bolt-on gearbox and therefore where larger screw jacks are used the layouts will be different.

KSZ-2 bevel gearbox

Technical data

Drive ratio	1:1
Tooth type	spiral-toothed
Nominal speed	1500 rpm
Max. speed	3000 rpm
Nominal torque	3 Nm
Max. torque	4.2 Nm
Idling torque	0.25 Nm
Duty factor	up to 40%
Lubricant	fluid grease
Weight	0.45 kg
Housing material	hard anodised aluminium
Shaft material	stainless steel

Part no.: KSZ-2

Spiral-toothed

Spiral toothing ensures high torque and low running noise

Bolt-on, shaft-mounted gearbox

The KSZ-2 has a continuous hollow shaft. Thus it can easily be bolted on to the Z-2 screw jack gearbox and requires very little space.

Easy bolt-on assembly:

Part no.: 2 bolts DIN 912 M5x55, A4

Stub shaft

Fitting a stub shaft allows the KSZ-2 to be used as a conventional right-angle gearbox.

Stub shaft T (long)

Material:
stainless steel

Part no.: KSZ-2-STW-T

Stub shaft L (short)

Material:
stainless steel

Part no.: KSZ-2-STW-L

KGZ straight-toothed

Shaft configuration

If one of the shafts is vertical, this must be stated when ordering: e.g.: "vertical drive shaft"

Material specifications

- Housing material: GGL 20
- Bevel gears: straight-toothed, gas nitrided
- Roller bearings
- Permanent lubrication with synthetic oil
- Temperature range -10°C to +90°C

- Drive ratio $i = 1:1$
- Maximum speed 1500 rpm
- Duty factor 20% (max.)
- Repair: change complete gearbox
- In the upper speed range, values of 90 to 100 dBA may occur

Ordering example:

KGZ-25-T-1

Bevel gearbox
straight-toothed
Size
Shaft configuration T-1 or L-1

* KGZ-1 straight-toothed gearboxes are especially suitable for manual operation or infrequent motorised operation. Running noise is higher in comparison with KSZ spiral-toothed bevel gearboxes. KGZ-1 has the same dimensions as KSZ.

KSZ spiral-toothed

The spiral-toothed version is recommended for motorised operation

Shaft configuration

The direction of rotation changes when the gearbox is reversed

If one of the shafts is vertical, this must be stated when ordering: e.g.: "vertical drive shaft"

Manufacturing and quality features:

- Housing material: GGL 20
- Low-backlash version
- Quiet running
- High torque transmission in a small size
- Spiral-toothed bevel gears:
- Pre-loaded taper roller bearings
- Drive ratio $i = 1:1$

- Permanent lubrication with synthetic oil; oil change required only on heavy duty applications
- Sealing by means of shaft seals and O-rings
- Max. 40% duty factor at 1500 rpm
- Compatible with screw jack modular components
- All installation dimensions symmetrical
- Shaft ends are identical to those for screw jack gearboxes of the same size

$$K_{\text{deep}} = K \cdot 1.5$$

Quality features

- Extremely quiet operation
- Maintenance-free, with minimum backlash
- High torques in relation to size
- High duty factor or continuous operation
- High concentricity
- Suitable for the most demanding applications

Manufacturing features

- Spiral bevel gears, palloid-toothed, case-hardened, precision lapped as pairs
- Tooth contact mechanically adjusted to +/- 15µ
- Roller bearings tested for noise
- GD250 (Meehanite) cast-iron housing, low-distortion with good torsional stiffness
- Radial shaft seals with dust lip

- Oil filling: synthetic oil HT68, permanent lubrication
- Standard drive ratio $i = 1:1$, other ratios on request
(CAUTION: Dimensions may change)

KST high-performance gearbox

Special instructions:

If the duty factor is more than 20% and the speed is more than 3000 rpm, you should specify a grease and oil level inspection glass when ordering.

The KST bevel gearbox is available on request with drive ratios of 1:2 (higher output speed) to 6:1 (lower output speed) and as a flanged gearbox for direct attachment to your motor or servomotor.

*the bearing for the profile 300-K is fixed and not adjustable

U-profiles are made of hot-rolled 18MnNb6 in lengths up to approx. 12 m. The advantage compared to material S355J2G (St52-3) is that the elastic limit and tensile strength are considerably higher. Our profiles are generally aligned. We supply all profiles in fixed lengths.

On request we can supply profiles in paint primer finish or hot-dip galvanised. We will be happy to offer fully finished profiles to your requirements, e.g. drilled, milled, with welded-on elements.

Hot-rolled U-profiles

Rolled U-profiles

This U-profile is rolled and pickled in S235JR material, in lengths up to approx. 8 m.

Combined bearing, eccentric adjustment

Adjustable eccentric axial bearing

Removing the front cover gives free access to the axial bearing. Turning the axial bearing changes the dimensions H, L and s by between 1.5 mm and 4.0 mm depending on the size of the bearing. See column L. Up to 8 intermediate positions are available.

After the adjustment has been set correctly, the front cover is refitted. Apply thread locking to the screws at reassembly.

*the bearing for the profile ZP-300-K is fixed and not adjustable. It can be adjusted only by means of shims under the flange plate.

Flange plates for combined bearings

The determining factor for selection of the flange plate is the diameter "d" of the combined bearing.

If the flange and bearing are ordered together they are supplied ready welded to each other.

Rectangular flange, e.g.: ZF-01

Square flange, e.g.: ZF-01-Q

Material: Steel, S235J.K, stainless steel on request

Shims for the flange plates

Rectangular ZDB

Square ZDBQ

Ordering example:

ZDB-050-05

ZDB = rectangular
ZDBQ = square
Diameter "d" of the flange plate
Shim thickness
05 = 0.5 mm; 10 = 1.0 mm

Material: Steel DC01 or comparable, stainless steel on request

Technical data

Materials:

Bearings: Inner ring and cylindrical bearing: Steel 100Cr6, hardened and tempered
Outer rings: Case-hardening steel 20MnCr5, case-hardened
Weld-on pin: S355J2G3 or comparable
18MnNb6 (profile ZP-300-K in S235JR)

Profiles: S235J..K

Flange plates: S235J..K

Shims for Flange plates: Steel DC01 or comparable, stainless steel on request

Flange plates:

If the bearing and flange plate are ordered together they are supplied ready welded to each other.

If the customer is performing the welding, please note the following recommendation:
It is not essential that the combined bearings are dismantled by a fitter before being welded in.

Welding recommendation:

- Standard welding wire G4Si1
- Wire diameter 1.2
- with little transfer of heat

If however the bearing is dismantled, when the screws are reinserted they should be locked with "medium strength" thread locking.

Speed:

max. 1.5m/s travel speed

Temperatures

Standard: -30°C to +130°C

Special bearings are available on request for:

- high temperatures up to 250°C
- for operation in cold stores down to -40°C
- for operation in a vacuum (coarse, fine or high vacuum)

Corrosion resistant:

Profiles: rolled profiles can be painted.
On request, profiles can be supplied spray galvanised 80-100µm (galvanised finish can be painted)

Bearings: Customers usually oil the bearings lightly as protection against corrosion.
Bearings with coated backs are available on request

Tolerances:

Size, type and bearing tolerances to DIN 620, tolerance class: PN
Load factors: C = dyn. load factor ISO 281/1, Co = stat. load factor ISO 76

Setting the bearings (axial):

The setting of the axial play can be performed either by adjusting the eccentric pin in the bearings or simply by inserting shims under the flange plate.

Technical specifications

Determination of the necessary spacing between the bearings

Formula:

$$X = \frac{P \cdot Y}{2 \cdot F_1}$$

Explanatory notes:

- P: Total load (working load + own weight) in N at central load distribution
- Y: Load spacing (centre of bearing to centre of load) in mm
- X: Bearing spacing in mm
- F1=F2: max. load on the bearing in N, under the application of Hertzian contact stress between bearing and profile

Determination of the necessary load-bearing capacity of the bearings

Formula:

$$F_1 = \frac{P \cdot Y}{2 \cdot X}$$

Frictional value

Formula:

$$M_R = f \cdot F \cdot \frac{d_M}{2}$$

Under most operating conditions the approximate frictional power will be sufficient. Depending on the amount of grease present, these values may be higher or lower than stated.

Explanatory notes:

- d_M : Average bearing diameter $(d+D)/2$
- f: Frictional value for cylindrical bearings 0.002
- F: Radial load

in harmony!

Installation, operation, inspection

Correct installation and commissioning is important for reliable operation of the system. Good maintenance is a precondition for a long service life.

Please therefore study the Instruction Manual which are supplied with each delivery and are also available for downloading from: www.zimm.at

Design advice

Design and specification

Selection and dimensioning is the customer's responsibility, because we are not familiar with the design criteria such as installation location and type of application. On request we can provide support during selection and specification and make proposals with subassembly drawings and calculations based on your application parameters. You can then examine and approve these drawings and their parts lists.

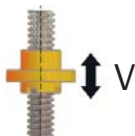

These then serve as basis for production and preassembly and assist your employees during installation and fitting. We guarantee the quality of the machine elements as described in the catalogue. The gearboxes are designed for industrial use at the loads and duty cycles specified in the catalogue.

If your requirements are not covered by our catalogue descriptions, please contact our project technicians. We generally deliver according to our current Terms of Sales and Delivery (Section 10).

Lifting speed

Lifting speed $v = \frac{\text{Screw pitch } P}{\text{Gear ratio } i} \times \text{motor speed } n$

m/min

There are several parameters which affect the lifting speed:

Faster:

- double-pitch screw (not generally held in stock): This doubles the lifting speed (CAUTION: max. input torque, not self-locking – brake required!)
- increased screw for the R version (next larger size of gearbox): depending on the screw jack size, this will give a somewhat greater pitch / lifting speed
- Ball screw: Various pitches are available (CAUTION: not self-locking– brake required!)

- Frequency converter serves to increase the motor speed to more than 1500 rpm. Please note the maximum gearbox speed.

Slower:

- Motors with more poles/lower speed (6, 8, 10 or 12 poles)
- Frequency converter (CAUTION: if the motor is to be operated for extended periods at frequencies less than 25 Hz, adequate cooling must be assured, e.g.: separately driven fan)
- Geared motor (CAUTION: do not exceed the maximum input torque)
- Bevel gearbox with gear reduction (only suitable for certain applications)

Temperature and duty cycle

Screw jacks are generally not designed for continuous operation.

Refer to the diagram on the gearbox pages (Sections 2 + 3) for the maximum duty cycles (ED).

These are reference values but vary according to usage conditions. In borderline cases, select a larger screw jack or contact our project technicians.

Operating temperatures must not exceed 60°C (gearbox) or 80°C (screw) (higher values on request).

Rotation protection

On the version S₁, the translating screw is free running within the gearbox (worm wheel).

The screw must be protected against rotation – otherwise it would rotate due to the friction in the worm wheel. This can be achieved by fixing the screw to an external guidance system or by using our rotation protection (VS) (in the protective tube).

Parallelism and angular relationships

Attention must be paid to the parallelism and correct angular relationships of mounting surfaces, gears, nuts and guides to each other. The same applies for exact alignment of gears, pedestal bearings, connecting shafts and motors to each other.

Guides

Guide bush play in the screw jack gearbox can be between 0.2 mm and 0.6 mm depending on the size. This is just a secondary support and does not replace a guide system specifically provided to cater for lateral forces.

Design advice

Safety distance

Safety distances between moving and stationary components must be maintained otherwise there is the risk of the screw jack reaching a blocked position (see Gearbox Dimension Sheets).

Accuracy

The repetition accuracy of the gearbox can be up to 0.05 mm when moving to the same position again under the same load conditions.

This requires measures on the drive side, such as a 3-phase AC motor with a brake in conjunction with a frequency converter, a rotary pulse encoder or a servomotor with encoder, etc.

The pitch accuracy for trapezoidal screws is 0.2 mm over a 300 mm screw length, and 0.05 mm for ball screws over a 300 mm screw length.

Under alternating loads, axial play can be up to 0.4 mm on trapezoidal screws and 0.08 mm on ball screws (when new).

Direction of rotation and movement

Check the direction of rotation required for the system and record this on the drawing or select one of our standard system layouts (Checklists). With T bevel gearboxes, the direction of rotation can be changed simply by turning the gearbox around.

Self-locking / overrunning

Screw jacks with a single-pitch trapezoidal screw have a limited self-locking capability which cannot always be relied upon, especially where impact loads or vibrations are present (brake recommended).

The overrun after the motor has been switched off varies depending on the application. To minimize overrun, we recommend using a braked motor or a spring pressure brake FDB. A braked motor is essential for double-pitch screws or ball screws, because these are not self-locking.

Drive

We recommend the use of a frequency converter to achieve smooth start-up and brake ramps. This minimizes start-up noise and extends the service life of the gearbox.

Trial runs!

Trial runs without load and under load in normal operating conditions are necessary to ensure reliable operation. Do not exceed system duty cycle when loaded. These on-site trial runs are necessary to achieve system alignment and to eliminate any factors which may impair operation.

Spare parts

To protect against loss of production caused by high duty cycles or high loads, we recommend keeping a set of screw jack spare parts (including screws, accessories and with assembly drawings) at your location or at your customer's location.

Theatre stage design

We supply lifting equipment which satisfies the current regulations on theatre stage design.

Land vehicles, aircraft and water craft

Our extended warranty terms generally do not apply to machine elements used in any land vehicles, aircraft and water craft. Special individual terms may be agreed on inquiry.

Ambient conditions

Please specify any ambient conditions that are outside normal industrial environmental conditions (Checklists - Section 7).

Design advice

Lubrication

Adequate lubrication is determine for the service life of a screw jack. Therefore ensure adequate lubrication of screws, gearboxes and rotation protection. The red lubrication strip for rotation protection can be mounted in alternative positions to meet your requirements (please specify).

Please also refer to our lubricator and our Instruction manual.

Lubrication for short stroke applications

S version:

For short stroke applications (stroke < gearbox height), take particular care to ensure lubrication of the trapezoidal screw.

The simplest tactic is to specify the screw jack with a longer stroke than the gearbox height, and occasionally perform a lubrication stroke. Otherwise, contact our Engineering Department for a suitable solution.

R version:

If stroke length < nut height, use a nut with lubrication capability (such as a duplex nut DM).

Instruction manual

Please refer to our Instruction manual during the design phase (www.zimm.at).

Design advice for steel and plant construction:

Hardly any assembly problems arise when screw jacks are used in machine tools, because the relevant surfaces are machined faces.

In steel and plant construction however, frequent geometric errors can occur in welded structures, despite accurate fabrication work. The interaction between different components can also cause alignment issues. Attention must be paid to the following:

Parallelism / angular relationships:

Screws and guides must be parallel to each other, otherwise the equipment can seize up during operation. All mounting surfaces for the gearboxes must be exactly at right angles to the guides, jamming may occur, leading to rapid wear and/or serious damage.

Squeaking noises can also occur on R versions. The mounting surfaces for the nuts must also be at right angles.

ZIMM has developed the self-aligning nut PM (see Section 4) to save time and costs here.

Additional features where alignment may be a problem are the integrated pivot bushings in the gearbox or the pivot bearing plate KAR (see Section 4).

For steel and plant construction:

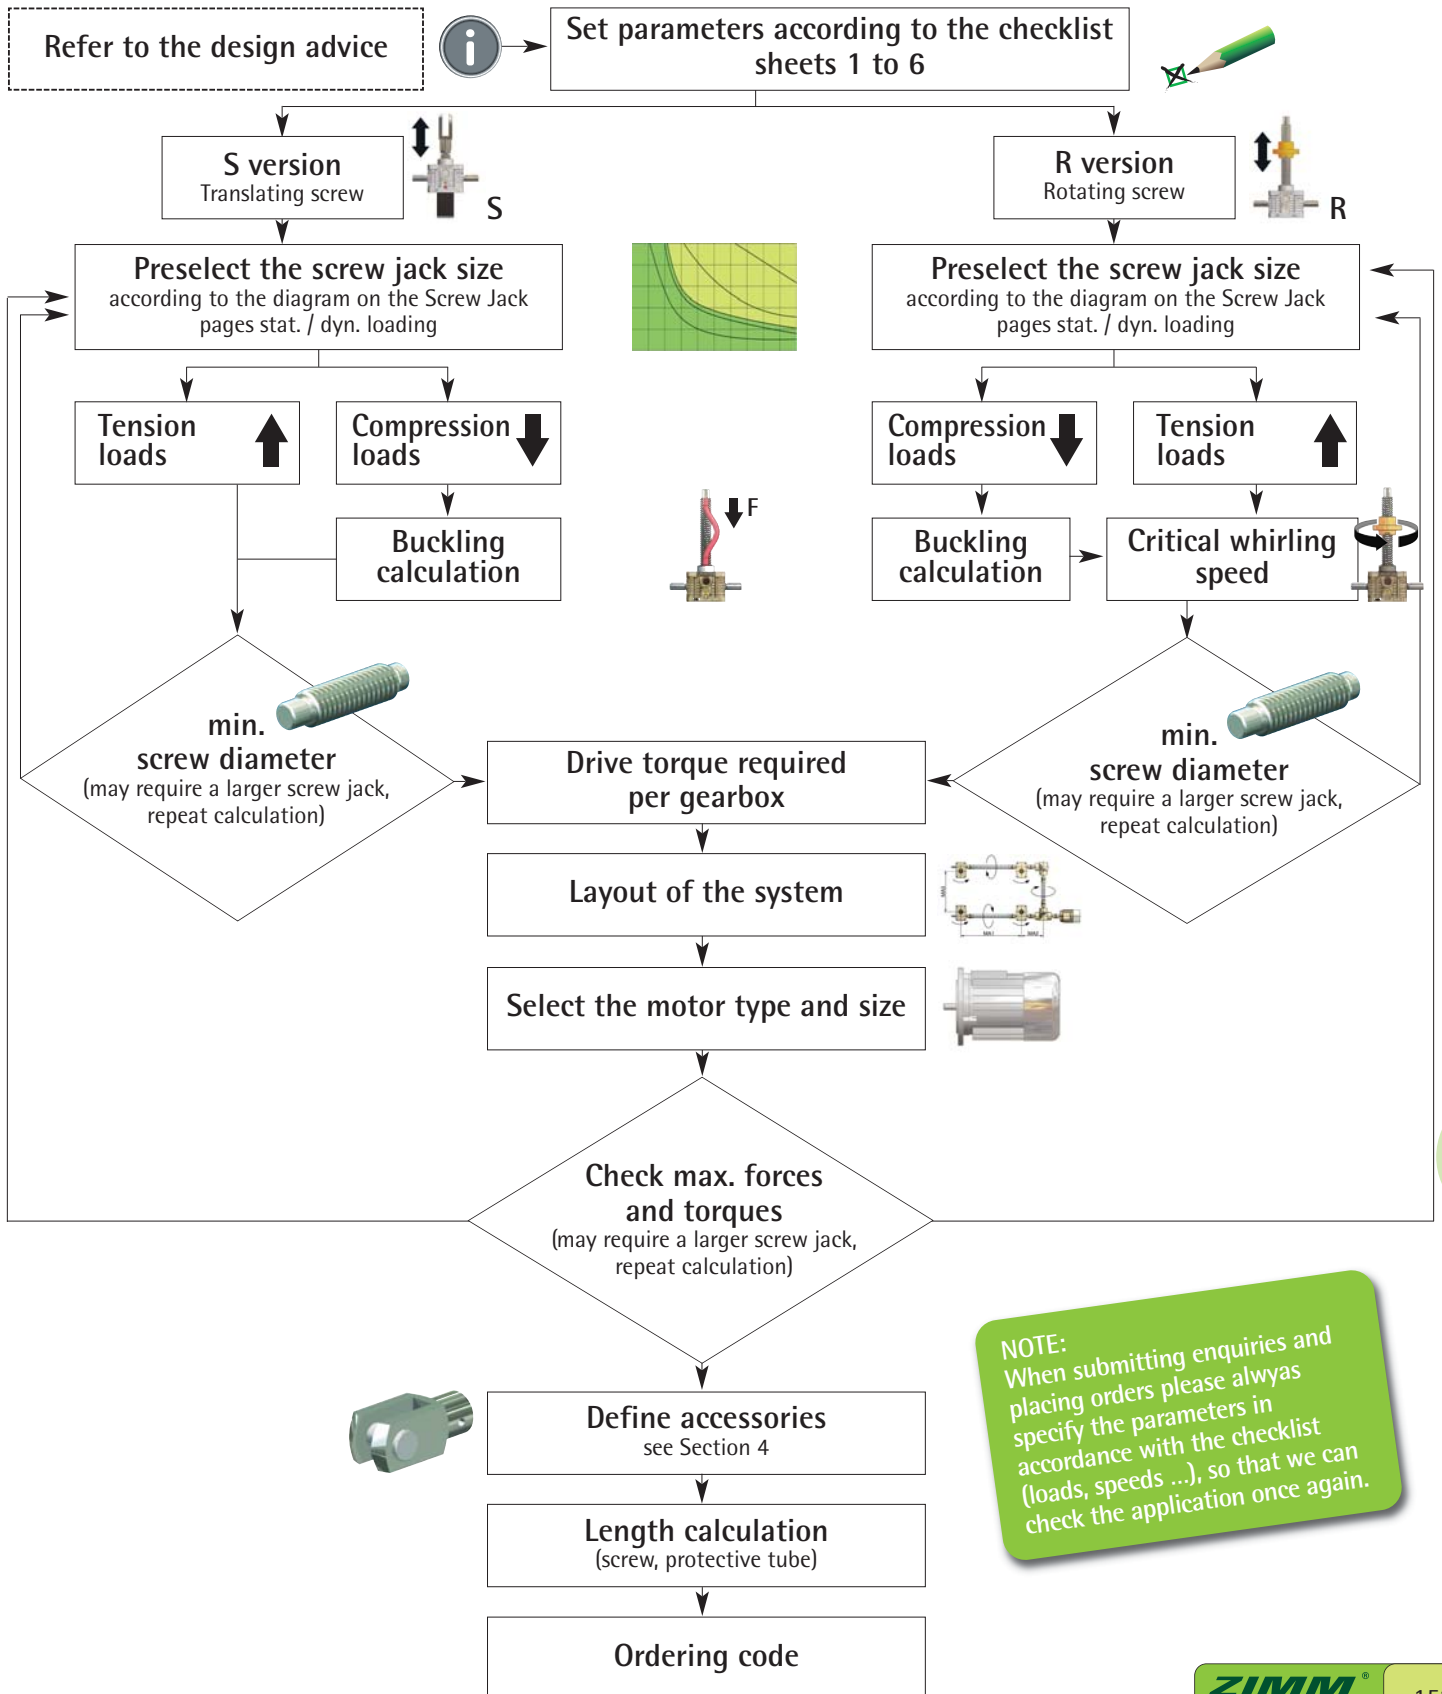

We supply standard heavy-duty linear guides including bearings. Their stability, long service life, avoidance of geometric errors and ability to accept lateral side forces are decisive arguments for using such guides.

See Section 6 for linear guides.

 Printing errors, dimensional mistakes etc. and also technical changes and improvements are excepted. Drawings are valid only when they have been checked and approved by both partners in accordance with the order acknowledgement.

Specification of a screw jack or lifting system – procedure

NOTE:
When submitting enquiries and placing orders please always specify the parameters in accordance with the checklist (loads, speeds ...), so that we can check the application once again.

Fixing - fixed

From above:

Through screws
(for the Z series)

The great advantage of the Z series is that it can easily be attached from above.

Fixing strips
(for the GSZ series)

Top mounting fixing strips BFL are required for attaching GSZ gearboxes from above.

Through the mounting plate:

Blind tapped holes
(Z and GSZ series):

Z and GSZ series can be attached from underneath using the blind tapped holes in the gearbox.

GSZ: all sizes

Z: Z-5 to Z-25 (holes the same size as the previous MSZ gearboxes)

Fixing - pivoting

Duplex nut adapter DMA

The duplex nut adapter DMA is simply bolted to the duplex nut DM. The pivot can be made with the pivot mounts LB or a mounting designed by the customer.

Pivoting support tube STRO

The pivoting support tube STRO has the advantage that the pivot points are entirely external. The disadvantage is that the gearbox and motor weights are in the centre. The manufacture is always customer-specific.

Fixing - pivoting

Z-5 to Z-25

Integrated pivot bearing

Simple and economical design: Pivot bushes are incorporated in the gearbox housing.

With pivot bearing plate KAR

For large motors, long strokes and high load cycles, the variant with the pivot bearing plate KAR is preferable, because the weight of the motor is then taken by the bearing points and does not affect the screw.

Z-35 to Z-1000

Integrated pivot bearing

Simple and economical design: Pivot bushes are incorporated in the gearbox housing.

GSZ-2 to GSZ-100

With pivot bearing plate KAR

For GSZ gearboxes, a pivot bearing plate can be mounted on face E (above) or F (underneath). In each case there are 4 holes available for the pivot plate P or R.

Pivot bearing plate KAR on request

Permissible loads - fixed

The screw jacks themselves are specified for full static nominal load under tension and compression. The permissible load depends on the type of fastening.

Compressive load

Full rated load
The gearbox can accept the full static rated load.

Mounting plate with tensile load

Full rated load
The gearbox can accept the full static rated load.

Permissible loads - fixed

Tensile load on the fixing screws (blind tapped holes) - Z and GSZ

Full rated load

Providing the screw-in depth is maintained and the screws are tightened to the full tightening torque, the full rated load is permissible.

Gearbox	Thread*	Screw-in depth [mm]	Tightening torque [Nm]
GSZ-2	M6	8 to 10	8
GSZ-5, Z-5	M8	10 to 11.5	19
GSZ-10, Z-10	M8	10 to 15	17
GSZ-25, Z-25	M10	12 to 15	27
GSZ-50	M12	12 to 17	38
GSZ-100	M16	16 to 22	82

Tensile load on the fixing screws (through holes in the housing)

Screws 8.8

Reduced load

If the fixing screws on the housing are loaded in tension, only reduced loads are permissible.

For higher loads in tension, we can offer certain solutions on request.

Gearbox	Permissible load
Z-5	2.5 kN
Z-10	3.5 kN
Z-25	10.0 kN
Z-35	29.8 kN
Z-50	27.5 kN
Z-100	27.0 kN
Z-150	56.5 kN
Z-250	70.0 kN
Z-350	180.0 kN
Z-500	110.0 kN
Z-750	210.0 kN
Z-1000	on request

Permissible loads - pivoting

When dimensioning, include all the parts you will use

Z-5 to Z-25 - Pivot bearing in the housing

Z-5 to Z-25 - Pivot mounts LB

Z-5 (Z-5/10-LB)	Rated load 5 kN	Rated load 5 kN	Rated load 5 kN	Rated load 5 kN
Z-10 (Z-5/10-LB)	Rated load 10 kN	Rated load 10 kN	7 kN	6.5 kN
Z-25 (Z-25-LB)	19.5 kN	17.5 kN	10 kN	9.5 kN

Z-5 to Z-25 - Pivot bearing plate KAR

Z-5-KAR	Rated load 5 kN	2.5 kN	2.5 kN	Rated load 5 kN
Z-10-KAR	Rated load 10 kN	3.5 kN	3.5 kN	Rated load 10 kN
Z-25-KAR	Rated load 25 kN	10 kN	10 kN	Rated load 25 kN

Direction of loading

The direction of loading should be selected so that the gearbox is pressed against the pivot bearing plate. When the load is in the opposite direction, reduced load values apply.

Permissible loads - pivoting

The gearbox housing is relevant to the specification.
The pivot mounts Z-35 to Z-1000 are specified for the full rated load in both directions.

Z-35 to Z-1000 – Pivot bearing in the housing

Z-35	Rated load	35 kN	Rated load	35 kN
Z-50	Rated load	50 kN	Rated load	50 kN
Z-100	Rated load	100 kN	Rated load	100 kN
Z-150	Rated load	150 kN	Rated load	150 kN
Z-250		177 kN	Rated load	250 kN
Z-350		250 kN		260 kN
Z-500		280 kN		310 kN
Z-750		on request		on request
Z-1000		on request		on request

Z-35 to Z-1000 – Pivot mount LB

From Z-500 the gearbox is mounted the opposite way round, since the footplate is broader than the rest of the housing:

Z-35 to Z-1000	Rated load	Rated load	Rated load	Rated load
----------------	------------	------------	------------	------------

Duplex nut adapter DMA

Main direction of loading
Select the main direction of loading so that tensile loads on the nut are avoided.

Support tube STRO

In compression the full rated load permissible. In tension the support tube should be subjected only to limited loads.

Critical buckling force of the screw

Explanatory notes:

I = 2nd moment of area expressed in mm^4
 F = Max. load/gearbox in N
 L = Free screw length in mm
 E = Modulus of elasticity for steel ($210,000 \text{ N/mm}^2$)
 v = Safety factor (normally 3)
 d = Minimum core diameter of the screw

Example:

$F = 45,000 \text{ N/gearbox}$
 $L = 1320 \text{ mm}$
 $v = 3$

Euler 1

Formula:

$$I = \frac{F \times v \times (L \times 2)^2}{\pi^2 \times E} \quad \text{then} \quad d = \sqrt[4]{\frac{I \times 64}{\pi}}$$

Example:

$$I = \frac{45,000 \text{ N} \times 3 \times (1,320 \text{ mm} \times 2)^2}{\pi^2 \times 210,000 \text{ N/mm}^2} = \frac{9.0896^{11} \text{ mm}^4}{2,072,616.924} = 453,965.22 \text{ mm}^4$$

$$d = \sqrt[4]{\frac{453,965.22 \text{ mm}^4 \times 64}{\pi}} = 55.15 \text{ mm minimum core diameter}$$

= Z-250 (screw core $\varnothing = 59.6 \text{ mm}$)

Euler 2

Formula:

$$I = \frac{F \times v \times L^2}{\pi^2 \times E} \quad \text{then} \quad d = \sqrt[4]{\frac{I \times 64}{\pi}}$$

Example:

$$I = \frac{45,000 \text{ N} \times 3 \times (1,320 \text{ mm})^2}{\pi^2 \times 210,000 \text{ N/mm}^2} = \frac{2.35224^{11} \text{ mm}^4}{2,072,616.924} = 113,491.305 \text{ mm}^4$$

$$d = \sqrt[4]{\frac{113,491.305 \text{ mm}^4 \times 64}{\pi}} = 38.99 \text{ mm minimum core diameter}$$

= Z-100 (screw core $\varnothing = 43.6 \text{ mm}$)

Euler 3

Formula:

$$I = \frac{F \times v \times (L \times 0.7)^2}{\pi^2 \times E} \quad \text{then} \quad d = \sqrt[4]{\frac{I \times 64}{\pi}}$$

Example:

$$I = \frac{45,000 \text{ N} \times 3 \times (1,320 \text{ mm} \times 0.7)^2}{\pi^2 \times 210,000 \text{ N/mm}^2} = \frac{1.15259^{12} \text{ mm}^4}{2,072,616.924} = 55,610.7396 \text{ mm}^4$$

$$d = \sqrt[4]{\frac{55,610.739 \text{ mm}^4 \times 64}{\pi}} = 32.62 \text{ mm minimum core diameter}$$

= Z-50/Tr50 (screw core $\varnothing = 39.8 \text{ mm}$)

	GSZ-2	Z-5	Z-10	Z-25	Z-35/50	Z-50/Tr50	Z-100	Z-150	Z-250	Z-350	Z-500	Z-750	Z-1000

*Depending on the pitch, the core \varnothing may be even larger. See the KGT pages in Sections 2 and 3 for the exact core \varnothing values.

Critical whirling speed for R gearboxes

Maximum permissible screw rotational speed

$$n_{zul} = 0.8 \times n_{kr} \times f_{kr}$$

n_{zul} Maximum permissible screw speed (rpm)

n_{kr} Theoretical critical screw speed (rpm) leading to resonant vibrations (see diagram)

f_{kr} Correction factor which makes allowance for the type of screw bearing

i The operating rotational speed must not exceed 80% of the maximum rotational speed

with end mounted bearings
(preferred solution)

without end mounted bearings
(avoid as far as possible)

$$\text{Screw speed} = \frac{\text{Input drive speed}}{i_{\text{gearbox}}}$$

The maximum allowable screw speed must be calculated for R version gearboxes (with rotating screws) with long thin screws. To do this, read the theoretical critical speed n_{kr} from the diagram. Take into account also the additional lengths for screw covers etc. when calculating unsupported screw lengths. Now use the formula together with the correction factor for the screw bearing arrangement to calculate the maximum allowable screw speed.

If the calculated maximum screw speed is lower than the required speed, select a larger screw or a double-pitch screw with half the speed. This must then be checked also. You have the option to use a "increased screw" for the R version (screw for the next larger gearbox).

Bear in mind that a larger pitch demands a higher drive torque.

CAUTION:

Long, thin screws can tend to squeak even though they satisfy the critical whirling speed! Therefore allow a sufficient margin of safety in the calculation.

Determining the drive torque [M_G] of a single screw jack

Explanatory notes:

M_G	necessary drive torque [Nm] for a screw jack
F	Lifting load (dynamic) [kN]
η_{gearbox}	Efficiency of the screw jack (without screw)
η_{screw}	Efficiency of the screw
P	Screw pitch [mm]
i	Drive ratio of the screw jack
M_L	Idling torque [Nm]
P_M	Motor drive power

The following specifications serve to calculate the required drive torque.

For gearboxes with single-pitch trapezoidal screws the load can simply be multiplied by the factor stated on the corresponding gearbox page (Sections 2 + 3).

Use at least 10% of the gearbox rated load for the calculation, even if the effective load is less than this (i.e. for the Z-250 use at least 25 kN).

Formula:

$$1) \text{ Drive torque: } M_G = \frac{F \text{ [kN]} \cdot P \text{ [mm]}}{2 \cdot \pi \cdot \eta_{\text{gearbox}} \cdot \eta_{\text{screw}} \cdot i} + M_L \text{ [Nm]}$$

$$2) \text{ Motor power: } P_M \text{ [kW]} = \frac{M_G \text{ [Nm]} \cdot n \text{ [rpm]}}{9550}$$

3) We recommend multiplying the calculated value by a safety factor of 1.3 to 1.5 (up to 2 for small systems and for low speeds).

Example:

Z-25-SN

$F = 12 \text{ kN}$ (dynamic lift load)

$\eta_{\text{gearbox}} = 0.87$ $\eta_{\text{screw}} = 0.391$

$P = 6$ $i = 6$

$$1) M_G = \frac{12 \text{ kN} \cdot 6 \text{ mm}}{2 \cdot \pi \cdot 0.87 \cdot 0.391 \cdot 6} + 0.36 \text{ Nm} = 5.97 \text{ Nm}$$

$$2) P_M = \frac{5.97 \text{ Nm} \cdot 1500 \text{ rpm}}{9550} = 0.938 \text{ kW}$$

3) Example: $0.938 \text{ kW} \cdot 1.5 = 1.407 \text{ kW} \rightarrow$ motor 1.5 kW

Drive torque for screw jacks - approximate calculation

Calculation

The drive torque required for a lifting system is the sum of the torques for the individual screw jacks and increases due to frictional losses on transfer components such as couplings, connecting shafts, bevel gearboxes etc.

To simplify the calculation, the following factors are used to determine the drive torque for the most common system layouts.

M_R - Overall drive torque for the entire system.

M_G - Drive torque for an single gearbox

M_A - Starting torque max. $1.5 \times M_R$

Example (example from page 162, 12 kN per gearbox)

$$M_R = M_G \times 4.9 = 5.97 \text{ Nm} \times 4.9 = 29.25 \text{ Nm}$$

→ x safety factor 1.4 = 40.95 Nm

CAUTION:

We recommend multiplying the calculated value by a safety factor of 1.3 to 1.5 (up to 2 for small systems and for low speeds). The values stated assume equal distribution of the load across all gearboxes!

Drive torque for screw jacks – precise calculation

The following calculation example takes account of the efficiency of the connecting shafts (η 0.95) and bevel gearboxes (η 0.9).

Formula for the gearbox::

$$\text{Drive torque: } M_G = \frac{F \text{ [kN]} \cdot P \text{ [mm]}}{2 \cdot \pi \cdot \eta_{\text{gearbox}} \cdot \eta_{\text{screw}} \cdot i} + M_L \text{ [Nm]}$$

Efficiencies:

Connecting shafts:	η 0.95
Bevel gearbox:	η 0.90

Example:

$$1) \quad M_G = \frac{12 \text{ kN} \cdot 6 \text{ mm}}{2 \cdot \pi \cdot 0.87 \cdot 0.391 \cdot 6} + 0.36 \text{ Nm} = 5.97 \text{ Nm}$$

$$2) \quad \frac{5.97 \text{ Nm}}{0.95} = 6.28 \text{ Nm}$$

(efficiency of the connecting shaft)

$$3) \quad 5.97 \text{ Nm} + 6.28 \text{ Nm} = 12.25 \text{ Nm}$$

$$4) \quad \frac{12.25 \text{ Nm}}{0.9} = 13.61 \text{ Nm}$$

(efficiency of the bevel gearbox)

$$5) \quad \frac{13.61 \text{ Nm}}{0.95} = 14.33 \text{ Nm}$$

$$6) \quad 12.25 \text{ Nm} + 14.33 \text{ Nm}/0.9 = 29.53 \text{ Nm}$$

$$7) \quad 29.53 \text{ Nm} \cdot 1.4 = 41.34 \text{ Nm}$$

We recommend multiplying the calculated value by a safety factor of 1.3 to 1.5 (up to 2 for small systems and for low speeds).

Z-25-SN

$F = 12 \text{ kN}$ (dynamic lift load per gearbox)

$$\eta_{\text{gearbox}} = 0.87 \quad \eta_{\text{screw}} = 0.391$$

$$P = 6 \quad i = 6$$

$$12.25 \text{ Nm} \cdot 1.5 = 18.38 \text{ Nm}$$

-> so KSZ-25-L is OK (see Section 5)

41.34 Nm -> we need a KSZ-50-L
(see Section 5)

Motor selection: 132M-P4-7.5 kW (50 Nm)
(for motors see Section 4)

maximum forces / torques

Loading definitions:

- F - Lifting load tensile and/or compressive
- F_S - Lateral loads on the screw
- v_H - Lifting speed of the screw
(or nut if the R version)
- F_A - Axial load on the input shaft
- F_R - Radial load on the input shaft
- M_R - Input torque
- n_R - Input speed

Lateral forces on the lifting screw

The maximum permissible lateral forces are shown in the table on the right. Lateral forces should generally be taken by linear guides. The guide bushing in the gearbox functions only as a secondary guide. The maximum lateral forces actually occurring must be less than the values shown in the table!

CAUTION: only applies to static forces.

maximum lateral force F_S [N] (only static)

extended screw length in mm

Length calculation – screw and protective tube

A quicker method

The tables on the following pages allow you to calculate the required screw length and protective tube extension length yourself. This lets you quickly calculate the fitting dimensions of your screw jack.

Principle

Depending on the version and accessories used the screw (and the protective tube on the S version) are extended. These dimensions are minimum requirements. For special fitting situations, please provide a drawing or contact our project technicians.

Stroke + basic length (+ various extensions for variants/accessories)

Example S:

Z-25-SN, stroke: 250 mm
 Bellows Z-25-FB-300 (ZD=70mm)
 Fixing flange BF (means the bellows do not require an fixing ring)
 Rotation protection VS
 Limit switch ES

Screw length Tr:

$$\begin{array}{rcccccc}
 250 & + & 180 & + & 44 & + & 45 & = & 519 \text{ mm} \\
 \text{Stroke} & & \text{Basic length} & & \text{Bellows} & & \text{Limit switch +} & & \text{Screw length} \\
 & & & & (70-26=44) & & \text{rotation protection} & & \\
 & & & & \text{Section 4} & & & &
 \end{array}$$

Protective tube length SRO:

$$\begin{array}{rcccccc}
 250 & + & 53 & + & 72 & = & 375 \\
 \text{Stroke} & & \text{Basic length} & & \text{Limit switch +} & & \text{Protective tube length} \\
 & & & & \text{Rotation protection} & &
 \end{array}$$

Example R:

Z-25-RN, stroke 250 mm
 Screw with end support (opposed bearing plate GLP)
 Bellows Z-25-FB-300 (ZD=70mm) above and underneath
 Duplex nut DM

Screw length Tr:

$$\begin{array}{rcccccc}
 250 & + & 139 & + & 60 & + & 55 & + & 50 & = & 554 \text{ mm} \\
 \text{Stroke} & & \text{Basic length} & & \text{Bellows gearbox side} & & \text{2nd bellows} & & \text{Duplex nut} & & \text{Screw length} \\
 & & & & (70-10=60) & & (70-15=55) & & & &
 \end{array}$$

See Section 4 for the length calculation for connecting shafts.

Abbreviations:

Safety distances are already included in the basic lengths!

(Tr screws: 10 mm up to Z-50, 20 mm for Z-100 to Z-500, 40 mm for Z-750 and Z-1000)

- The value will be added to or subtracted from the ZD dimension of the bellows depending on the sign and the result then added to the screw length. Applicable only to Tr single-pitch screws, not to double-pitch and KGT screws.
- Limit switches ES are always used in combination with rotation protection VS (VS is included in the extension).
- KGT 50: L6=82
- KGT 50: L6=118
- KGT 63: L6=90
- KGT 63: L6=124
- KGT 63: L6=118

Screw extension for spiral spring cover SF: Since the extension for spiral spring covers varies according to the fitting, this variant must be determined from a drawing. We would be pleased to prepare this drawing for you.

2. Bellows ³⁾	ZD-40		ZD-60		-		-		-	
KGT flange nut KGF	add the respective nut length									

Safety distances are already included in the basic lengths (2x: 1x above and 1x underneath)!
(Tr screws: 10 mm up to Z-50, 20 mm for Z-100 to Z-500, 40 mm for Z-750 and Z-1000)

- When using a larger diameter screw, select the components for the next size gearbox (Z-10 increased screw has a screw Tr 30x6 which means component Z-25 - this is then the calculated screw extension for size 25).
- The basic length for KGT screws includes the safety clearance L3 shown on the gearbox dimension sheet. The nut length must then be added to this.
- The value will be added to or subtracted from the ZD (compression) dimension of the bellows depending on the sign and the result then added to the screw length. Applicable only to Tr single-pitch screws, not to double-pitch and ball screws.

Screw extension for spiral spring cover SF:
Since the extension for spiral spring covers varies according to the fitting, this variant must be determined from a drawing. We would be pleased to prepare this drawing for you.

Innovative separate lubrication

i The separate lubrication system is essential for high performance.

- 1** The **INNOVATION**: Screw lubrication **during operation** provides optimum grease distribution.
- 2** The same **INNOVATION** is also available for the ball screw version (KGT).

- 1** Screw lubrication **during operation** provides optimum grease distribution.
- 2** The same lubrication system is also available for the ball screw version (KGT).

Screw lubrication

1 Trapezoidal screw

Inspect the trapezoidal screw regularly and regrease it depending on the operating cycle.

Use the grease that we recommend. These greases are ideally matched to the operating requirements of our screw jack systems.

2 Ball screw KGT

Lubricate the ball screw KGT every 300 hours of effective operation. For heavy-duty systems every 100 hours.

Grease quantity: Guidance value approx. 1 ml per cm screw diameter.

Gearbox lubrication

3 Gearbox lubrication

The gearbox is sealed and is filled with high-performance synthetic grease (gearboxes from Z-250 are oil-filled). The gearbox is lubricated for life in normal operation.

See Section 4 for the list of lubricants.

Cartridge 400 g

Lubricator
Z-LUB, ZIMM lubricator

Lubrication for short stroke applications

S version:

For short stroke applications (stroke < gearbox height), take particular care to ensure lubrication of the trapezoidal screw.

The simplest tactic is to specify the screw jack with a longer stroke than the gearbox height, and periodically perform a lubrication stroke. Otherwise, contact our Engineering Department for a suitable solution.

R version:

If stroke length < nut height, use a nut with lubrication capability (such as a duplex nut DM).

General

Special lubricants

For special applications and for the earlier MSZ gearboxes we can offer suitable lubricants in each case.

These include amongst others:

- High-temperature grease
- Low-temperature grease
- Food grade grease
- Clean room grease, etc.

Other greases, contamination

Using multipurpose greases and other greases can significantly impair operation and shorten the service life.

If the screw becomes dirty, clean and regrease it.

Long-life systems

The grease used in long-life systems (such as working platforms and theatre stages) loses its lubricating properties after about 5 years.

Dust and dirt penetration intensify this effect. We recommend complete cleaning and regreasing after 5 years.

If mineral greases are used, this may be necessary after only 2-3 years.

Installation, operation, inspection

Correct installation and commissioning is important for reliable operation of the system. Good maintenance is a precondition for a long service life.

Please therefore study the Instruction Manual which are supplied with each delivery and are also available for downloading from: www.zimm.at

Operational reliability and safety

Operational reliability and safety
Operational reliability and safety are just as important for industrial systems as for theatre stages and other systems.

Design and specification

During the design and specification phase, pay special attention to the load capacity of the drives and accessories in their proposed installation situation. Plan your system with appropriate safety for attachment, movement and transport elements.

Please note the design advice given in Section 8.

Where the system is safety-relevant, fit a safety nut SIFA. If the nut thread is stripped due to wear, the SIFA takes the load. An electronic control is available on request.

Installation

Correct and careful installation is essential for trouble-free and safe system operation. Please refer to our instruction manual included with each delivery. You can download these from the Internet at www.zimm.at

Inspection and maintenance

Regular inspection and maintenance are necessary to maintain reliability.

Check the following during the regular inspections:

Visual condition, attachments and connections, wear on the trapezoidal thread and the level of lubrication. Comply with our lubrication instructions and use only the lubricants we recommend. Please consider our automatic lubricator Z-LUB.

Spare parts

To protect against loss of production caused by high duty cycles or high loads, we recommend keeping a set of screw jack spare parts (including screws, accessories and with assembly drawings) at your location or at your customer's location. A screw jack can most economically be repaired by a complete exchange.

Screw jack with safety nut SIFA

ZIMM Instruction Manual in other languages and for special products are available on request or by downloading from www.zimm.at

Temperature

The ambient temperature is very important for system operation.

Always inform us about ambient temperature and conditions, especially if these deviate from the usual 20°C to 25°C.

Normal temperature (-20°C to +60°C)

A normal temperature range is up to about 60°C gearbox operating temperature. The highest temperature rise is at the shaft seal ring and on the trapezoidal screw. Various tests have shown that the temperature rise of a Tr screw is twice that of the gearbox housing.

Example:

At an ambient temperature of 20°C, the housing reached about 60°C (rise of 40°C) and the Tr screw about 100°C (rise of 80°C).

We recommend the temperature of Tr screws should not exceed 100°C when using standard gearboxes.

Low temperature (-20°C to -40°C):

Seals and most of our greases are specified in principle for temperatures down to -40°C. Experience has however shown that applications below -20°C are critical. The grease becomes very viscous and hard to move and it becomes difficult in particular to satisfy the breakaway torque.

Generally speaking, all components must be sized adequately for minus temperatures because the material strength is reduced (apart from aluminium).

We recommend low temperature grease for temperatures less than -20°C. Our standard gearboxes up to size Z-150 are filled as standard with a synthetic fluid grease that is already suitable down to -40°C.

High temperatures (+60°C to +160°C):

For ambient and operating temperatures (gearbox housing) higher than 60°C we recommend gearboxes with high-temperature grease and FPM seals. These can generally permit operating temperatures up to 160°C.

High temperatures (up to +200°C):

At temperatures up to 200°C we use FPM seals and a special grease.

We offer appropriate heat-resistant components for high temperature applications.

Temperature range of standard parts:

Standard screw jacks	-25°C to +80°C (-40°C to +100°C)
High temperature screw jacks	up to 160°C, or 200°C
Round bellows	-32°C to +70°C (max. +85°C)
Polygonal bellows	-15°C to +70°C (no exposure to direct sunlight)
Limit switch	-30°C to +85°C
Rotary pulse encoder DIG	-40°C to +80°C
Motors	above 40°C reduced power, e.g. factor 0.8 at 60°C
Connecting shafts VWZ+KUZ-KK	0°C to +70°C, reduced from -20°C to +100°C (max. +120°C)
Couplings KUZ	-20°C to +70°C, reduced from -40°C to +100°C
Bevel gearboxes	-10°C to +90°C
Ball screws KGT	-20°C to +80°C

For lower and higher temperatures, please request information on the component from us, with your checklist (Section 7).

Ambient and operating temperatures:

The ambient temperature is relevant for components such as limit switches or bellows. For gearboxes, the operating temperature is slightly or considerably higher than the ambient temperature, depending on the duty cycle.

Clean room

Sectors

Various fields such as semiconductor production, flat screen production, optical and laser technology, spacecraft production etc. demand high cleanliness, which means that clean room standards must be maintained.

Clean room

A clean room is a room where the concentration of particles in the air is controlled and satisfies defined cleanliness classes. It is important to keep the particle contamination caused by work materials, lubricants and drives to a minimum.

Your system

Use the checklist in Section 7 to enquire about the system you require and also specify the particular requirements for your application. We can then offer you a system to meet your requirements.

Food industry

Food industry sector

The foodstuffs sector operates at a very high level of automation. On the one hand this promotes a very high level of hygiene, on the other hand it permits intelligent and efficient systems for economic production

Resistant against corrosion

Our Z and GSZ series are corrosion-resistant and are therefore very suitable for most applications in the food industry. The GSZ gearbox with its smooth surfaces is particularly suitable.

The Z and GSZ series are not suitable for special applications where stainless steel is mandatory.

Screw jack systems

We supply gearboxes and systems with food grade grease to the food industry. Our food grade greases are FDA-approved. Use the checklist in Section 7 to enquire about the system you require and also specify the particular requirements for your application.

Resistant against corrosion

Corrosion-resistant as standard - no need for painting

All relevant components of the ZIMM - Z series and GSZ series are coated as standard with various single-layer and multi-layer systems resistant against corrosion. This eliminates the need for time-consuming and cost-intensive painting.

The colours black, anthracite and silver are visually neutral and fit in with any colour combination. The coating are specially matched to the various base materials and their functions. This ensures high-quality protection against corrosion for many application areas.

Opening and closing a container

Screw jack application examples

Film roll turning for horizontal and vertical loading and releasing

Panel transport trolley with precise height adjustment for a smooth transfer

Tradition and modernity all under one roof

We place great value on creative freedom and the courage to pursue new ideas. Our company location at Lustenau in the Vorarlberg Rhein valley reflects our entrepreneurial spirit and our philosophy.

At ZIMM we provide movement behind the scenes – as in a theatre.

For us, the focus is on the customer – we seek to provide solutions to his requirements with our innovative products and wide range of equipment – which has been our goal for more than 35 years.

left: Gunther Zimmermann (CEO)
right: Jürgen Zimmermann (Company founder)

ZIMM – your partner for screw jack systems and transmission parts

- more than 35 years experience in drive technology
- present internationally in more than 40 countries in the world
- advice and support on site from factory-based and field service staff
- innovation by constant development of our product range with new and improved models
- very high product quality and a very good price-performance ratio
- short lead times thanks to intelligent logistics and stocking levels

Well-known companies trust ZIMM. You can rely on ZIMM – your capable partner for all aspects of drive technology.

Our experienced and qualified team offer full support at all times. We look forward to helping with your next project.

left: Peter Gridling, Manager, Screw Jack Systems
right: Martin Gfall, Manager, Transmission Parts

Information about ZIMM Transmission Parts can be found in our Transmission Parts catalogue or by downloading from the Internet at: www.zimm.at

ZIMM Transmission Parts

A wide selection of standard parts from the catalogue

- spur gears, internal ring gears, bevel gears,
- worm screws and worm wheels,
- splined shafts and hubs,
- toothed racks,
- toothed drive belts and pulleys,
- clamping bushes, clamping rings and clamping sets,
- trapezoidal screws and nuts,
- ball screws,
- couplings, connecting shafts,
- linear guides (profiles und rollers),
- precision guide shafts and linear ball bearings
- chains and chain sprockets

ROSTFREI Many components are also available in stainless steel on short lead times.

We will be happy to perform modifications to standard catalogue parts, such as drilling, slotting, turning and milling work.

We will also be happy to manufacture to your drawings.

ZIMM Actuators ZSA can be found in our Actuators catalogue or by downloading from the Internet at: www.zimm-solar.com

ZIMM Actuators ZSA

Precisely following the sun – with tracking drives

The field of activity of our sister company ZIMM Solar GmbH is very large solar power arrays, such as those installed in Spain, Germany and the USA. So as to achieve the highest possible power generation, the photovoltaic cells track the sun at exactly the right angle from sunrise to sunset, using ZIMM Power Jack Systems "actuators". Precisely tracking the sun!

As well as photovoltaic installations, ZIMM actuators are also used for satellite tracking, wind turbines, cladding and shading systems, door drives and other industrial applications.

- Sturdy design accepts high tensile and compressive forces (available in 3 sizes)
- Quick and easy connection
- Resistant to wind and weather
- Low-maintenance for 20 years and more
- Alignment precision to 0.1 mm
- High reliability
- Flexible power supply arrangement (24 V DC, 230 V AC, 230/400 V AC, etc.)
- Integral rotary pulse encoders and limit switches
- Control options include CAN bus

Patents

We have patents registered or pending for a range of functions and components.

Copyright and rights of use

All copyright and rights of use regarding information, artwork, photographs and drawings presented on our website and in our catalogues are reserved exclusively to us. Text and graphics are protected by copyright. Their use, duplication and re-use – especially where this involves distribution to third parties – requires our express permission in writing.

Exclusion of liability

Neither our website nor our catalogues ranks as commercial or legal advice. Such a commitment requires a specific enquiry and conclusion of a contract with us.

The contents of our catalogues and website are not binding and do not constitute an offer to conclude a contract. We accept no liability for the currency, accuracy or completeness of their contents. This applies in particular to contents of external websites accessed by links from our website. We are entitled to change the contents of our catalogues and website at any time. We accept no liability for and make no guarantee of the availability of our website or catalogues. **Drawings are valid only when they have been checked and approved by both partners in accordance with the order acknowledgement.**

Effectiveness at law of the exclusion of liability

If a legal relationship has arisen exclusively from the contents of our website or catalogues without any direct contact between us, this is subject exclusively to Austrian law, with exclusion of the tie-breaker rule. All legal disputes arising shall be subject to the exclusive jurisdiction of the court having competence for A-6890 Feldkirch.

Data protection declaration

We are subject to the provisions of the Austrian Federal Data Protection Act for protection of personal data. We will pass personal information and data relating to persons to other parties only where this is for the purpose of and in relation to contractual orders. Information may be passed to suppliers and subcontractors only where such companies which can offer sufficient guarantees of secure use of the data. We are permitted to pass data to companies directly or indirectly associated with us.

ZIMM Maschinenelemente GmbH + Co KG

General Terms and Conditions

ZIMM Maschinenelemente GmbH + Co KG, Millennium Park 3, 6890 Lustenau/Austria
Phone: 00 43 (0) 55 77/806-0, Fax: 00 43 (0) 55 77/806-8, E-mail: info@zimm.at, www.zimm.at

1. General:

All our contracts are subject to the following terms and conditions unless agreed to the contrary in writing: These terms and conditions are deemed acknowledged and agreed by signing the contract. Any terms and conditions – of any nature – contrary to our general terms and conditions shall be completely inapplicable and invalid, irrespective of the form in which they were brought to our knowledge. Deviations from these general terms and conditions shall be effective only if they have been agreed and confirmed by us in writing. Any agreement to abandon this formal requirement must equally be in writing and signed by both parties. Silence concerning any terms and conditions that deviate from our standard conditions shall not be regarded as consent.

2. Quotations | prices | contractual content

- 2.1. Our quotations remain valid for 60 days after submission, subject to changes in accordance with Point 2.5.
- 2.2. Information in our our catalogues is not contractually binding (see also Point 3).
- 2.3. All our prices are understood to be in Euros and exclusive of VAT. Unless agreed to the contrary, the prices to be invoiced will be our list prices at the time of concluding the contract. These prices are ex works, excluding packaging, freight and/or shipping. Where consignment and delivery have been contractually agreed, prices do not include costs for unloading and transportation to the working site. Risk and rights of use are transferred to our contractual partner at the time of shipment. Delivery is thus always ex works.
- 2.4. **Delivery lead times and dates** are binding provided they have been promised by us in writing. This commitment lapses if our contractual partner requests modification of the order after placing the order or if obstacles outside our control occur, due for instance to force majeure or late delivery by our suppliers.
- 2.5. **Changes to economic circumstances**
If new circumstances arise outside our control, such as materials, taxes, wage rates, strike, war, terrorist attacks, blockades, fire, natural catastrophes or acts of God, we are entitled to amend our quotations and contracts accordingly. This applies particularly in the event that the prices of copper or aluminium rise by more than 10%. In all these cases we are entitled, even after concluding the contract, to amend our prices and due dates.

3. Design and specification

Selection and dimensioning is the customer's responsibility, because we are not familiar with the design criteria such as installation location and type of application. On request we can provide support during selection and specification and make proposals with subassembly drawings and calculations based on your application parameters. This drawing including the parts list is subject to checking by you and approval by us. The drawing checked and approved by you is the basis for production and assembly.

4. Technical modifications during the contract

We are entitled to implement technical modifications after the conclusion of the contract, provided such modifications do not affect the contractual guaranteed performance of the goods.

5. Warranty and liability for defects

- 5.1. The warranty period is 1 year, without exception. Changes to the warranty period require our express commitment in writing.
- 5.2. Trial runs without load and under load in normal operating conditions (according to your design parameters) are necessary to ensure **reliable operation**. We perform our trials under no-load conditions, not under load, but under the customer's installation conditions.

These on-site trial runs are necessary to achieve system alignment and to eliminate any factors which may impair operation. We do not accept any liability for damage that is traceable back to the non-performance of on-site trials under load and representative working conditions. Furthermore we do not accept any liability, except where we have entered into a written assurance to the contrary, for installation of our products in any type of land vehicle, aircraft or water craft

- 5.3. Our contractual partners are obligated to verify goods after delivery and, if necessary, inform us in writing immediately, and in any case no later than within 14 days after delivery, about any **defects**. If no notice of defects is communicated within this time limit, the goods that are delivered are deemed approved and warranty claims –and damage claims shall be excluded.
- 5.4. Our **liability** shall be limited to intentional and severe gross negligence. Any liability for ordinary negligence, for consequential damages, financial loss, loss of profit, loss of interest or for damages resulting from claims of third parties shall be excluded.
- 5.5. **Mechatronic products**
Especially for applications that are installed outdoors, the equipment is subject to environmental conditions to an increased degree. If malfunctions arise, we require documentary evidence of the cause, such as environmental influences or product defects.
- 5.6. **Rectification of defects**
If product defects are accepted, the defective parts must be returned to us without delay, together with documentation of the defect. Your analysis of the cause of the defect is the basis for our laboratory testing and sustained defect prevention measures. The transport costs will be borne by the sender in each case.
6. **Retention of title**
 - 6.1. All goods delivered shall remain our sole property until complete payment of the purchase price.
 - 6.2. Our contractual partner is obliged to treat the goods carefully as long as retention of title applies to the delivered goods. If maintenance and/or inspection work is necessary, our contractual partner shall carry out such work regularly at his own expense.
 - 6.3. Installation or modification of the delivered contractual goods will not result in loss of title to those goods. Our contractual partner is not entitled to resell the delivered contractual goods as long as retention of title remains in force.
7. **Place of performance | Applicable law | Place of jurisdiction**
The exclusive place of performance for all contractual relations is A-6890 Lustenau. Austrian law applies exclusively, with exclusion of the tie-breaker rule.
All legal disputes arising from or relating to the business relations and contracts shall be subject to the exclusive jurisdiction of the court having competence for A-6800 Feldkirch.
8. **Severability clause**
Should any individual provisions in the above general terms and conditions be or become invalid, either in part or in full, this will not affect the validity of the other provisions. The invalid provision will be replaced by a ruling that is as close as possible in economic purpose to the invalid provision in a legally effective and practicable form.
